What is BlueSpiceContextMenu?

ContextMenu replaces the default browser context menu with wiki functions - depending on the context and user permissions.

Using find BlueSpiceContextMenu

Context menu opens when right clicking components that support ContextMenu functionality, namely, internal links and file links.

On internal links, ContextMenu will display quick links for basic page actions, like:

- Editing page
- Viewing page history
- Moving page
- Deleting page...

On file links, some additional options will be shown, like:

- Opening file page
- Downloading file
- Uploading new version of the file
- Opening files using client application (when available)

Exact content of ContextMenu menu depends on the wiki configuration

Settings for BlueSpiceContextMenu

Settings for context menu are located in user preferences (Special:Preferences page), under "BlueSpice" tab, and are separate for each user.

ContextMenu settings in user preferences

Administration

ContextMenu has two modes:

- Click on right mouse button and pressing CTRL (Normal right mouse button will show default browser menu)
- Click on right mouse button (Pressing CTRL will show default browser context menu)
