

Archive:ExtensionInfo

The special page ExtensionInfo (extensions) lists all BlueSpice extensions in your wiki.

Where do I find ExtensionInfo?

Screenshot: Open the list of extensions

You will find the list of all extension in the admin area. It is only visible for users with administration rights.

Functionality

Next to a list of extension names you will find the following information:

- Description: a short description of the extension's functionality
- Version: here you can see the version
- Status: information about the level of development (alpha / beta / stable)

Behind the name of the extension there is a link to an article in this helpdesk.

Administration

If you install a new extension it will be listed in the ExtensionInfo automatically. Further administration is only possible right now in the script path: `(/bluespice-mw/config/extension-settings.php)`

Note: In the special page `Spezial:Version` there is an overview as well.
