

FAQ:Namespace

Error: When updating a page within a Namespace I can force a review using Responsible Editor, but how do I force a workflow to be started?

Solution: "That's no standard feature and must be ordered."

Error: "Currently the option to add a moderator to a page is only available in the Main Namespace. We would also like to be able to add moderators to pages in the namespaces."

Solution: "to add responsible feature on another namespace please do the following steps:
index.php?title=Spezial:Wiki_Admin&mode=Preferences -> Responsible editors -> In List
"Enabled namespaces" select all entries as needed, save to apply."
