FAQ:Templates

Error: I have been trying to create page templates, and I can, but the templates that are presented during page creation, are red letter templates, and the template is empty at the page creation stage.

Solution: This is a known bug in 2.23.3 [1]. You will need to update BlueSpiceExtensions to latest REL1_23 branch state (not released as tarball yet). You can find the download here: https://extdist.wmflabs.org/dist/extensions/BlueSpiceExtensions-REL1_23-d78d922.tar.gz You will have to recreate the page templates as the error already got written to the DB. Alternatively you can try to fix the DB entries in bs_pagetemplate.pt_template_title (Remove namespace prefix). [1] https://gerrit.wikimedia.org/r/#/c/295888/

Error:

```
Since 2.23.2 there is a field missing at the Template creation prompt. It is missing
"Template Namespace" field. It is still missing in BS Version 2.27.0.
```

Solution: I believe this is a misunderstandig. We changed the input field of "Template" to be a combinded "namespace and title" field. If you click on the arrow you will be provided with a list of namespaces. Select one (if not shown initially try typing a fre letters into the textfield) and type the name (or part of the name) of the title after the colon. It will autocomplete on what you type. Try typing "Template:some". That should list you all pages from namespace "Template" that contain the word "some".
