

## Talk:Transclusion

if you set the read-permission explicit for one user group in any namespace, transclusions won't work anymore..

this inline hack (for your localsettings.php) should help:

```
* array of namespace ids (NS_MAIN, NS_HELP, etc)
* when empty: all namespace ar transcludable!
/
$bsgForceNsTranscludable = array( NS_MAIN, NS_TEMPLATE );
$wgExtensionFunctions[]=function()use($bsgForceNsTranscludable){$g=&$GLOBALS['wgNonincl
udableNamespaces'];$Ns=$bsgForceNsTranscludable;$g=empty($Ns)?$Ns:array_filter($g,funct
ion($e)use($Ns){return !in_array($e,$Ns);});};
```
