BlueSpice 2.23.3

BlueSpice 2.23.3 is a minor and maintenance release. This is a stable release.

Notable new features

- BlueSpice API: There is now a standardized API for many BlueSpice actions.
- ContextMenu: The extension is now enabled by default.
- Dashboards: There is a wiki page portlet, which allows you to use any wiki page as a dashboard item.
- ExtendedSearch: Introduces facet operators, which indicated whether multiple selections in a facet should be combined using AND or OR logic.
- ExtendedSearch: It is possible to open articles in the autocomplete list in new windows or tabs.
- Flexiskin: It is now possible to disable the background image.
- GroupManager: Raised group name character limit to 255 (was 16).
- InsertMagic: Tag descriptions are now much more descriptive.
- PermissionManager: Add hint flyout for every right.
- Upload: XML and SVG files can now be uploaded by default.
- UserMerge: Added extension to Distribution.
- UserSidebar: There is now a "global actions" navigation tab for every user.
- VisualEditor: Set default style for table to contenttable. This makes nicer tables.

BlueSpice Foundation

- General: ArticleHelper: Fixed fatal getRedirectTarget call on null
- General: Updated all URLs to bluespice.com and removed "Medienwerkstatt" from company name.

BlueSpice Extensions

- ArticleInfo: Stop using deprecated Skin::link
- Checklist: Fixed error when inserting checklists several times
- Checklist: Improved tag documentation
- ContextMenu: Added dependencies to fix runtime errors
- CountThings: Improved tag documentation
- Dashboards: Fixed Notice
- Dashboards: Fixed wikipage portlet error messages
- Flexiskin: Add some hook points
- General: Updated all URLs to bluespice.com and removed "Medienwerkstatt" from company name.
- InsertCategory: Removed wrong user information
- InsertLink: use user config var instead of browser settings to trigger java applet for file links
- InsertMagic: Added examples to description and reference implementation
- InsertMagic: Improve example code line wrapping
- PageAccess: Improved tag documentation
- PageTemplates: Remove loadmask workaround

- PagesVisited: Improved tag documentation
- ResponsibleEditors: Remove loadmask workaround
- Review: Added dependencies to fix runtime errors
- SmartList: Added exception for getToplist for mw > 1.24
- Smartlist: Improved tag documentation
- UniversalExport: Improved tag documentation
- WantedArticle: Improved tag documentation
- Watchlist: Improved tag documentation
- WholsOnline: Improved tag documentation

BlueSpice Skin

- Fix for different line height since mw 1.27
- Development: Upgrade jsonlint to report file/line
- General: Updated all URLs to bluespice.com and removed "Medienwerkstatt" from company name.

BlueSpice Distribution

- General: Improved tag documentation
- General: Updated all URLs to bluespice.com and removed "Medienwerkstatt" from company name.
- RSS: Updated RSS to 1.26 - works for 1.23 - 1.27

- Rating: Add special page to global actions widget
- Rating: Add use of token
- Rating: Added dependencies
- Rating: Enabled rating in context
- Rating: Fix rating icon path
- Rating: Fix typo
- Rating: Fixed Fatal
- Rating: Fixed context
- Rating: Fixed redirect context
- Rating: Fixes for api
- Rating: MW1.27 compatibility
- Rating: Use mw.config.get('wgScriptPath') instead of global wgScriptPath
- Rating: Use of Rating tasks api instead of deprecated ajaxExport
- Reminder: Added API classes for Expiry
- Reminder: Added API description and fixed typo
- Reminder: Added comment for updating from BSP 2.23.2
- Reminder: Added gitignore for local settings file
- Reminder: Added special page to global actions widget
- Reminder: Added table prefixes
- Reminder: All Reminder ajax function now use API calls
- Reminder: Breaking change: new database schema for Reminder and Expiry
- Reminder: Changed default sorting
- Reminder: Changed menu entry in personal tools to match the other entries
- Reminder: Correctly adding rem_comment
- Reminder: Expiry is now a standalone extension
- Reminder: Expiry now uses API for deletion
- Reminder: Expiry: adjusted callback function

- Reminder: Expiry: reworked i18n messages
- Reminder: ExtJS/RL runtime issues
- Reminder: Fixed paths after package name change
- Reminder: Moved Reminder and Expiry out of BSTeamwork and now in BSReminder
- Reminder: Added filter for title and date
- Reminder: Adopted afterDelete to new hook signature
- Reminder: Created ApiReminderStore to serve grid data
- Reminder: Enabled multiple deletion
- Reminder: delete user reminder on user deletion
- Reminder: Removed Expiry from Reminder API
- Reminder: Removed dependencies on Expiry
- Semantic: Added filtering to NamespaceManager integration
- Semantic: Added use of format table instead of datatable when pdf export
- Semantic: Deactivated help boxes in edit mode
- Semantic: ExtJS/RL runtime issues
- Semantic: Fixed removal of qtips
- Semantic: Removed all qtip divs (semantic bootstrap popups for tooltips)
- Semantic: Removed bswiki editor button
- Semantic: Require smw to be in /extension base dir, copied from _base
- Semantic: Update semanticforms and semanticformsinputs to master branch for mw1.27 compatibility
- Semantic: Use bssemantic delivered semantic extensions
- ServiceCenter: Added TagSearch/vendor
- ServiceCenter: Added filtering to NamespaceManager integration
- ServiceCenter: Added search string escaping
- ServiceCenter: Fixed hardcoded core
- ServiceCenter: Removed debug statement
- ServiceCenter: TagSearch: Improved tag documentation
- ServiceCenter: Used method POST and action fullUrl cause jquery could not handle the form action for some reason
- ServiceCenter: Used mw.config.get('wgScriptPath') instead of global wgScriptPath
- Teamwork: Added filtering to NamespaceManager integration
- Teamwork: Added stylings for pdf export
- Teamwork: Expiry and Reminder are now in the BlueSpiceReminder Repo
- TagCloud: Added to BlueSpice pro. This creates a tag cloud.
- VisualDiff: BugFix: PDF export only working correctly by using the more menu
- VisualDiff: ExtJS/RL runtime issues
- VisualDiff: Fixed fatal in mw > 1.23 | Config is needed
- VisualDiff: Forgot to use getCss() on parser
- VisualDiff: Modified css for pdf export
- VisualDiff: More mw 1.27 compatibility changes ResourceLoader -.-
- WikiExplorer: Added special page to global actions widget
- WikiExplorer: ExtJS/RL runtime issues

BlueSpice 2.23.3-beta

BlueSpice 2.23.3-beta is a minor and maintenance release. This is a beta release and not recommended for use in production

BlueSpice Foundation

- API: Added a generic group store API backend
- API: Added a generic WikiPage store
- API: Added BS.store.BSApi
- API: Added BSApiAdminUserStore
- API: Added Interwiki ExtJS store API module
- API: Added title filter to store api
- API: API I18N
- API: ApiExtJSStoreBase/BS.CRUDGridPanel: Filter
- API: ApiExtJSStoreBase/StringHelper: String filter
- API: ApiExtJSStoreBase: Implemented 'date' filter
- API: ApiGroupStore: Fixed return value
- API: ApiTasksBase: Added support for logging
- API: ApiTasksBase: Fixed token return value
- API: ApiTasksBase: needToken by default + hooks
- API: ApiTasksBase: read-only check
- API: ApiTasksBase: token mechanism for MW 1.24+
- API: BSApiFileBackendStore: userAdjust of timestamp
- API: BSApiTasksBase: stub implementation of task data param processing
- API: BsCommonAjaxInterface --> API
- API: BSTasksAPI: Added permission check
- API: Metadata node and data in ExtJSStoreBase
- API: New 'bs.api.tasks.exec'
