Installation

An installation is not needed, neither on Linux, nor on Windows. Simply put the files in the corresponding binary folder (/usr/local/bin or C:\BlueSpice\bluespice_bin) and make them executable.

Include in your Wiki installation

```
$bsgArticlePreviewCapturePhantomJSExecutable = "/usr/local/bin/phantomjs";
```

On Windows, adjust accordingly ("C:\\BlueSpice\\bluespice_bin\\phantomjs.exe").
