## About page signatures

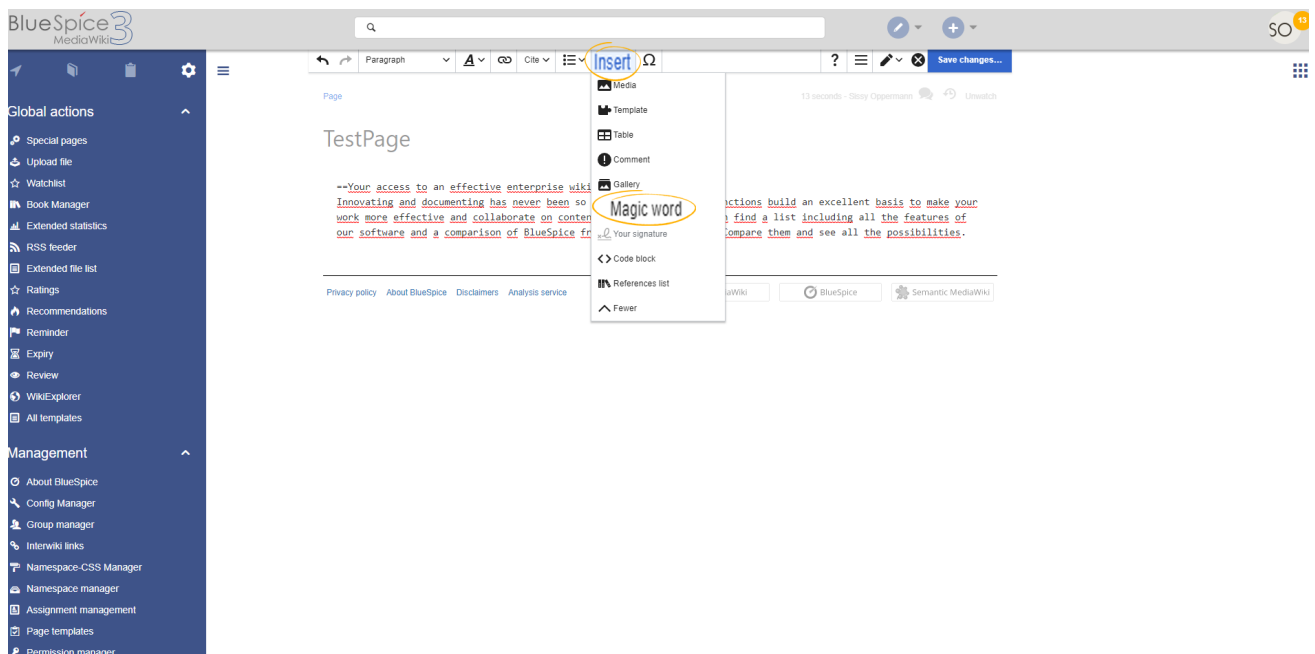

The extension **BlueSpiceSignHere** allows you to quickly sign off a wiki article. It enhances and automatizes built-in MediaWiki functions that allow users to leave their signature on the page.

## Inserting "sign here"

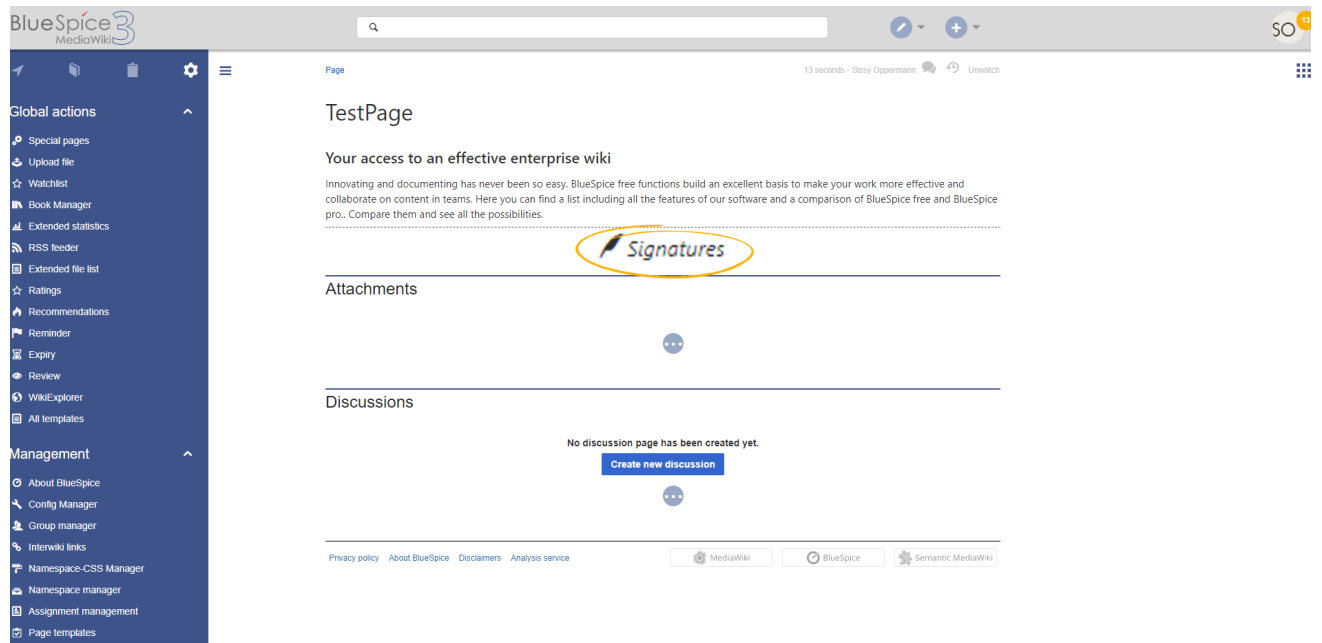

While in edit mode, add (usually on the bottom), the following tag in source edit mode.

```
<bs:signhere/>
```

Alternatively, you can insert the tag in visual editing mode with VisualEditor. Select *Insert* > *Magic Word* and select *signhere*:

Once the page is saved, every user who visits the page, sees a "sign here" field:

By clicking on this field, the user's signature is automatically inserted. The signature shows the username as defined in the user's [preferences](#) as well as the timestamp of the signing. Signatures appear in chronological order of signing.

## Restrictions

Every user's signature is added to the page in plain text, as it would be when using the built-in MediaWiki signature function. While it may not be obvious to users reading the page, all users with edit rights can add or remove signatures. As a safe-guard against such actions, the page history log shows any change to signatures along with the the user who made the change.
