About Config manager

With the Config manager, a wiki user with *sysop* rights can manage all BlueSpice wiki-wide settings in one place. In the [navigation](#), it is located under *Global navigations > Management > Config manager*. This link loads the page *Special:ConfigManager*.

Layout

All settings can be accessed through the following filter menus:

- Feature: group by type of functionality the setting belongs to (search, administration...)
- Extension: group by extension name
- Package: group by BlueSpice edition and services (BlueSpice free, BlueSpice pro, Matomo)

All settings are available in any type of grouping. Changing the grouping type does not add or remove setting options. It just groups them differently.

After settings are adjusted, they can be saved by clicking *Save*, or reset to the default settings by clicking *Reset*.

Searching for settings

A search bar is located above the list of settings. The search returns settings regardless of the currently selected group.

Settings by extension

BlueSpiceFoundation

- **Logo path:** The logo image should be stored in the `/images` folder of your installation. If you store it in the `/skins` folder of your BlueSpice installation, it could be overwritten with an upgrade.

To upload the logo directly in the wiki:

1. **Upload** the logo on the page *Extended file list* (*Special:ExtendedFilelist*). This is a link under the *Global actions* navigation.
2. **Search** for the logo name in the extended file list.
3. **Click** on the thumbnail image of the logo. This opens the logo on a separate page.

4. **Copy** the relative logo path from the address bar. In a typical Wiki configuration, this path starts with `/w/....`.

5. **Paste** the logo path into the text field for the logo.

6. **Click Save**.
7. **Refresh** the page (Strg+F5).

- **Favicon path:** The favicon image should be stored in the `/images` folder of your installation. If you store it in the `/skins` folder of your BlueSpice installation, it could be overwritten with an upgrade. [Favicon images](#) have the file extension `.ico`.
- **Allowed file extensions:** For security reasons, the types of files that users can upload are restricted. Here, you can allow additional file formats. If a file format is blacklisted in the server configuration, adding this file extension here will not allow this file type to be uploaded. See mediawiki.org/wiki/Manual:Configuring_file_uploads for more info.
- **Allowed image extensions:** The standard web image types are listed here. In general, you want to restrict image uploads to web images. See developer.mozilla.org/en-US/docs/Web/Media/Formats/Image_types for more on browser-supported image types.

BlueSpiceAbout

- **Show link "About BlueSpice" in the main menu:** Shows or hides the link to the page [AboutBlueSpice](#) in the main navigation.

BlueSpiceArticleInfo

BlueSpiceArticleInfo, together with BlueSpice Authors, is part of the *Page Information* in the Quality management tools.

- **Update interval in seconds:** Shows the date of the last edit. By default, this date is updated every 10 seconds via JavaScript.
