Developer:	HalloWelt	License:	<a href="#">GPL v3 only</a>
Type:	<a href="#">BlueSpice</a>	Category:	Personalization
Edition:	BlueSpice free		
<a href="#">View help page</a>			

## Features

**BlueSpiceAvatars** handles profile images of wiki users. Initially, every user has an automatically generated avatar.

## Usage / Features

This extension adds an option to each user's page to change his profile image. At the top of a user's page users can see their current profile image and the link "Userimage". Clicking on this link opens a dialog offering several options for setting a profile image:

- A new image can be uploaded.
- A image has already been uploaded to the wiki, or an image from the web (through URL) can be used.
- A new avatar can be generated.

## Technical information

### Configuration

In the [Config manager](#), the generator used to create the avatars can be changed. The options are

- InstantAvatar - random, the image contains initials of the user's name.
- Identicon - not random, is based on the user's IP address.

## Rights (permissions)

This extension does not require any special rights. User must have "read" permission in order to change his profile image.

## Requirements

This extension requires [BlueSpiceFoundation](#). The upload function must be enabled on the wiki.

## More info
