Developer:	HalloWelt	License:	<a href="#">GPL v3 only</a>
Type:	<a href="#">BlueSpice</a>	Category:	Editor
Edition:	BlueSpice free		
<a href="#">View help page</a>			

## Features

---

**BlueSpiceInsertLink** offers a dialogue to insert links without using wiki code.

## Usage / Features

---

If you are already in the edit mode, you find the function *InsertLink* in the editor toolbar. Click on the menu item to open the dialog box. If you want to delete a link, click on the link and click the red "remove"-icon in the dialog box that appears.

Users can link the following targets:

- other wiki pages
- external websites
- files uploaded to the wiki
- files on a network drive

These functions do not just save you time working with wiki code, but also present you with a list of existing articles in the wiki for you to choose from. If the page you are trying to link to doesn't exist (yet), a red note will be shown.

## Technical information

---

### Configuration

There are no configuration options for this extension.

## Rights (permissions)

This extension does not require any special rights. Users must have "edit" permission to be able to insert a link.

## Requirements

This extension requires [BlueSpiceFoundation](#).
