## Archive:Pastelmage

### Summary

BlueSpice

The package **Pastelmage** for BlueSpice allows users to include images in an article, either via Drag&Drop, or by copying it from the clipboard.

## At a glance\: Advantages

- Intuitive use
- No complicated code necessary
- Various possibilities for the user

## Where do I find Pastelmage?

**Pastelmage** is integrated in the edit mode of the wiki. Every time an image is pasted or dropped into one of the two editors, **Pastelmage** is automatically loaded and provides you a special window to enter further data.

## How do I use Pastelmage? (Step-by-step)

Note: Please see the entry Technical background for system requirements and compatibility!

#### **Option 1: Via Drag & drop**

**Step 1:** Open the respective wiki article in edit mode. Choose either the WYSIWYG editor or the wikicode view.

Step 2: Open your Explorer and choose the picture you want to add to your article.

**Step 3:** Drag and drop the picture into your editor window. A separate window will pop up where you can enter additional information and credentials.

#### **Option 2: Via Copy & Paste**

- **Step 1:** Open the respective wiki article in edit mode. Choose either view.
- **Step 2:** Open your Explorer and copy the image you want to add. Alternatively you can also press the screenshot key to save your current screen to the clipboard.

**Step 3:** Move your mouse cursor to the spot in the editor where you want to insert the image and press ctrl+v. You can now also enter additional information in a separate pop-up window.

## Features of Pastelmage

## Additional data

BlueSpice

When inserting the image, a pop-up window appears, allowing you to add the following information to the image:

- The **categories** the image can be found in
- A **summary description** that will appear on the file page of the image
- The **license** the image is under. Note: make sure that you only upload images you are allowed to!
- Furthermore you can place the image on a **watch list**, so you will always be informed about future changes of the image.

## Administration

# How can I adapt Pastelmage?

Administrators can change the following settings in the preference tab Pastelmage:

- **Default File Extension if none provided**
- Activate Java Applet (This setting can also be activated or deactived by the user in the personal user settings under the tab *BlueSpice*)

## Which rights are needed to use Pastelmage?

To use **Pastelmage**, users need editing rights in the respective namespace. Furthermore, rights to import new images (upload, reupload, reupload-shared) are also necessary.

## Additional system requirements

Pastelmage uses Java for the "Copy & Paste" functionality. So for using this feature, Java 1.7 or higher is required. Please keep your Java version up-to-date.

### **Browser compatibility**

Pastelmage is tested and ready-to-use for

- Firefox version 22 and higher
- Internet Explorer version 9 and higher
- Chrome version 13 and higher

Please note: Chrome stopped supporting Java from version 43, so "Copy & Paste" is also not supported anymore. Other features however are not affected.

## Troubleshooting

BlueSpíce

MediaWiki

#### • Application blocked for security reasons

O

	Application Blocked for	r Security	
	The application cannot be run.		
ATE	Name:         pasteImage           Location:         http://localhost           Reason:         Your security settings have blocked a self-signed apple	ication from running	ATED
outb	Screenshot: Security Blocking Error	OK More Information	5TV

If the applet is blocked for security reasons, you can add your wiki to the Exception Site List (required: Java 1.7.0\_51 or higher):

Step 1: Open your system settings and click on "Java".

Please note: regardless of your Java version, always restart your browser for the changes to take effect!

#### • Stop the applet from asking if you want to execute it

To stop Java from asking you if you want to execute this applet, you need to import the certificate as described above. In addition to that, with Java version 1.7.0\_51 or higher, you need to add your wiki to the trusted sites (as described above).

If all is correct, you see the following window:

1

	Do you want t	to run this	application?	
		Name:	PasteImage	
	<u></u>	Publisher:	HalloWelt! - Medienwerkstatt GmbH	
		Location:	http://localhost	
DATE	information at risk. R	un this applicat again for apps	icted access which may put your computer and personal ion only if you trust the location and publisher above. from the publisher and location above	JIDATES
	Screenshot:		)	

To stop Java asking for permissions for this applet, check the checkbox on the left hand side.

The BlueSpice extension **Pastelmage** is part of BlueSpice pro. It can also be purchased as a single extension in the BlueSpice Shop.
