What is a template?

A template is a type of reusable content that can be integrated into other pages of the wiki. It can be content-based (text template) or structure-based (layout template) or a combination of both.

A simple example is a notification box that looks identical on all pages, but contains different content on each page where it is used (layout template):

Tip: Message goes here

A template can also be used as the source for a [page template](#).

Characteristics of a template

- Allows inserting reusable content with a placeholder
- Is usually located in the namespace "Template"
- Can have parameters
- Often contains logic
- Used to maintain a "look and feel"

Creating and including a template

A new template is created like a regular page, but in the namespace **Template**.

Example: [Simple template for a notification box](#)

A template is then included in a page by putting the name of the template (i.e., the title of the template page without the namespace prefix "Template:") in two curly brackets:

```
{{NotificationBox}}
```

Note: Template names are case-sensitive.

Editing a template

Changes to a template affect all pages that include this template. Before existing templates are changed, it is recommended that you check which pages use the template. To find these pages, you can go to [Page tools > Toolbox > What links here](#).

Built-in variables

Each MediaWiki has a number of [built-in variables](#) that are not pages in the "template:" namespace, but are still used as templates.

For example, the variable }}}}}} returns the the current UTC time.

Further notes

- The use of a template is basically a [transclusion](#). It is also possible to use pages as templates that are not in the *Template* namespace. However, this is to be done wisely, since some functions require that the pages are in the template namespace.
- Templates can also be used to define the output of [semantic query](#). For more information, go to [Semantic MediaWiki](#). (This is an example where the pages must necessarily be in the template namespace.)
- The complete list of all pages of the wiki that are located in this namespace can be found on the page Special:Templates.

Template package

Subpages

- [Subpage 1](#)
- [Subpage 2](#)
- ...

List subpages of any wiki page

Note: This is a note.

Tip: This is a tip.

Example: This is an example.

Warning: This is a warning.

Important! This is important.

Working with blogs

ⓘ Last edited 11 days ago by [Blue](#)

About the blog

Basically, a blog is a list of comments, questions, or feedback from different users. The blog is often called chronologically, because, in the sense of a public journal, it keeps communication not only when the contributors are being commented, recommended, shared and related entries or placed in a personal website.

The extension [BlueSpiceWikiBlog](#) is part of [BlueSpiceWiki](#), the communication module of [BlueSpice](#). In addition to the blog, there are other types of social media widgets, such as comment discussion (text, attached or recording).

Contributions from all these types can be consolidated and displayed chronologically with [BlueSpiceWiki](#) in a timeline and [BlueSpice](#) can be used.

The blog function is ready to use on the special page: [Special:Blog](#). This page is linked directly from the main navigation in every new wiki installation. To you can start using the blog right away, it is recommended to include the blog functionality on any wiki page. Let's get right to it.

Adding the blog to a page

If you want to include a view of your blog on another page of your wiki, for example your homepage, you need to insert the necessary codeblock in the source code of your page.

Transclusion

Transclusion

Basically, a blog is a list of comments, questions, or feedback from different users. The blog is often called chronologically, because, in the sense of a public journal, it keeps communication not only when the contributors are being commented, recommended, shared and related entries or placed in a personal website.

The extension [BlueSpiceWikiBlog](#) is part of [BlueSpiceWiki](#), the communication module of [BlueSpice](#). In addition to the blog, there are other types of social media widgets, such as comment discussion (text, attached or recording).

Contributions from all these types can be consolidated and displayed chronologically with [BlueSpiceWiki](#) in a timeline and [BlueSpice](#) can be used.

The blog function is ready to use on the special page: [Special:Blog](#). This page is linked directly from the main navigation in every new wiki installation. To you can start using the blog right away, it is recommended to include the blog functionality on any wiki page. Let's get right to it.

Transclude a page into a page

Vertically centered
The box content is centered vertically and the title has no margin.

Box with padding
This box container has some padding around the content.
Try out 2 or 3 lines as well.

Box without padding
This box container has no padding but there is padding around the text.
Try out 2 or 3 lines as well.

Box without image
A banner can be text-based as well. Just don't add an image.

Add a banner to a page
