About the blog

Basically, a blog is a list of comments, questions, or feedback from different users. The blog is often sorted chronologically downwards, in the sense of a public journal. A lively communication can arise when the contributions are further commented, recommended, linked with related articles or placed on a personal watchlist.

The extension *BlueSpiceSocialBlog* is part of *BlueSpiceSocial*, the communication module of *BlueSpice*. In addition to the type blog, there are other types of so-called social entities, such as *comment*, *discussion topic*, *attachment*, or *microblog*.

Contributions from all these types can be consolidated and displayed chronologically with *BlueSpiceSocial* in a timeline and filtered and sorted as needed.

The blog function is ready for use on the special page *Special:Blog*. This page is linked directly from the main navigation in every new wiki installation. So you can start using the blog right away. It is also possible to include the blog functionality on any wiki page. Let's get right to it.

Adding the blog to a page

If you want to include a view of your blog on another page of your wiki, for example your homepage, you need to insert the necessary codeblock in the source code of your page.

Transclusion
