Manual:Extension/NSFileRepo

A quality version of this page, approved on *10 July 2020*, was based off this revision.

NSFileRepo enables uploading files to namepaces. The extension restricts access to upload and read files and images to a given set of user groups associated with the protected namespaces.

Associating files with namespaces

Files are uploaded to the File namespace (NS_FILE), but contain an additional namespace reference:
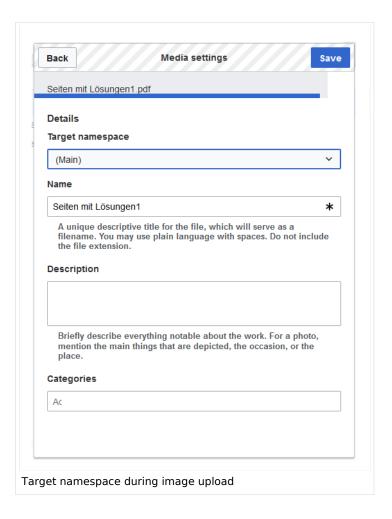

```
[[{FILE_NS}:{Namespace}:{Filename}]]
```

For example, a file can be uploaded to the namespace *Private*. where access to that namespace can be resticted to particular user groups:

```
[[File:Private:Filename.jpg]]
```

The namespace for a file can be provided in the upload dialog. By default, the namespace of the wiki page is provided, if you upload a file directly during page editing.

Target namespace during image upload
