Features

Description

BlueSpicePageTemplates allows users to create new pages from predefined templates to start with a basic page structure.

Usage / Features

- Create a template (with headers, categories, boxes and other content) in the template namespace.
- Create a page template using the special page [Special_PageTemplatesAdmin](#) give the page template a name and a description.
- Each template should be assigned a template from the "Template" namespace that represents the structure of a document.
- Page templates can be assigned to a particular namespace, so that a certain template will only appear when creating pages in that namespace.
- The page template is shown as a choice when a new page is created.

Technical information

Configuration

Some aspects of this extension can be configured on the page [Special:BlueSpiceConfigManager](#), under "Page templates". Here, wiki administrators can:

- Force a target namespace for the page that was created from the template
- Hide default templates

Rights (permissions)

Users must have "pagetemplatesadmin-viewspecialpage" permission in order to manage templates. This permission is assigned to the roles admin, maintenanceadmin and structuremanager by default.

Requirements

PageTemplates requires [BlueSpiceFoundation](#).

More info

For detailed description and usage, visit our [user manual](#).

Demo

You can create a new page in our [BlueSpiceDemo](#). and select a page template there.
