

Reference:BlueSpiceSocialTopics

Extension\>: BlueSpiceSocialTopics

Overview			
Description:	Topic and discussion entities for BlueSpiceSocial		
State:	stable	Dependency:	BlueSpice
Developer:	HalloWelt	License:	GPL v3 only
Type:		Category:	Communication
Edition:	BlueSpice pro		

Features

SocialTopics provides the SocialEntity types *discussion* and *topic*.

Usage / features

Warning: Pages in the namespaces *SocialEntity* and *User* are currently indexed by search engines by default. If you run a public wiki, you should [exclude these namespaces from being searchable](#) unless you want these pages to be indexed by public search engines.

At the bottom of each content page, the social entities associated with the page are displayed, filtered by the *topic* type.

The discussion page is completely replaced by the page view of the SocialEntity type *discussion*. It displays a timeline that lists the social entities of type *topic* that belong to this discussion. In addition, free text can be entered at the beginning of the discussion page just like on a standard MediaWiki discussion page.

Technical information

Entry fields for dialogs

Name	DescriptionD	Type	Default value
			current

Name	Description	Type	Default value
discussiontitleid	ID of the page to which the discussion topic belongs	integer/choice field	discussion page
