Introduction

With BlueSpice 3, we offer the installation as a complete package with MediaWiki and BlueSpice. This installation guide gives you step-by-step instructions to install BlueSpice.

Important! If you do a fresh install of BlueSpice 3.2 it might be necessary to run `update.php` afterwards if you get an error.

Note: This document only describes the steps for installing the web application itself. For the installation of extended functions such as [VisualEditor](#) and [Extendedsearch](#), please refer to the corresponding documentation.

We will not go into details about your operating system installation here, but assume that you have already [configured your system](#) and stored the installation package in a web root of your choice, where you can access it via your browser. You can find more details in our detailed [installation guide](#).

Further help on optimizing the operating system can be found in our [compendium](#).

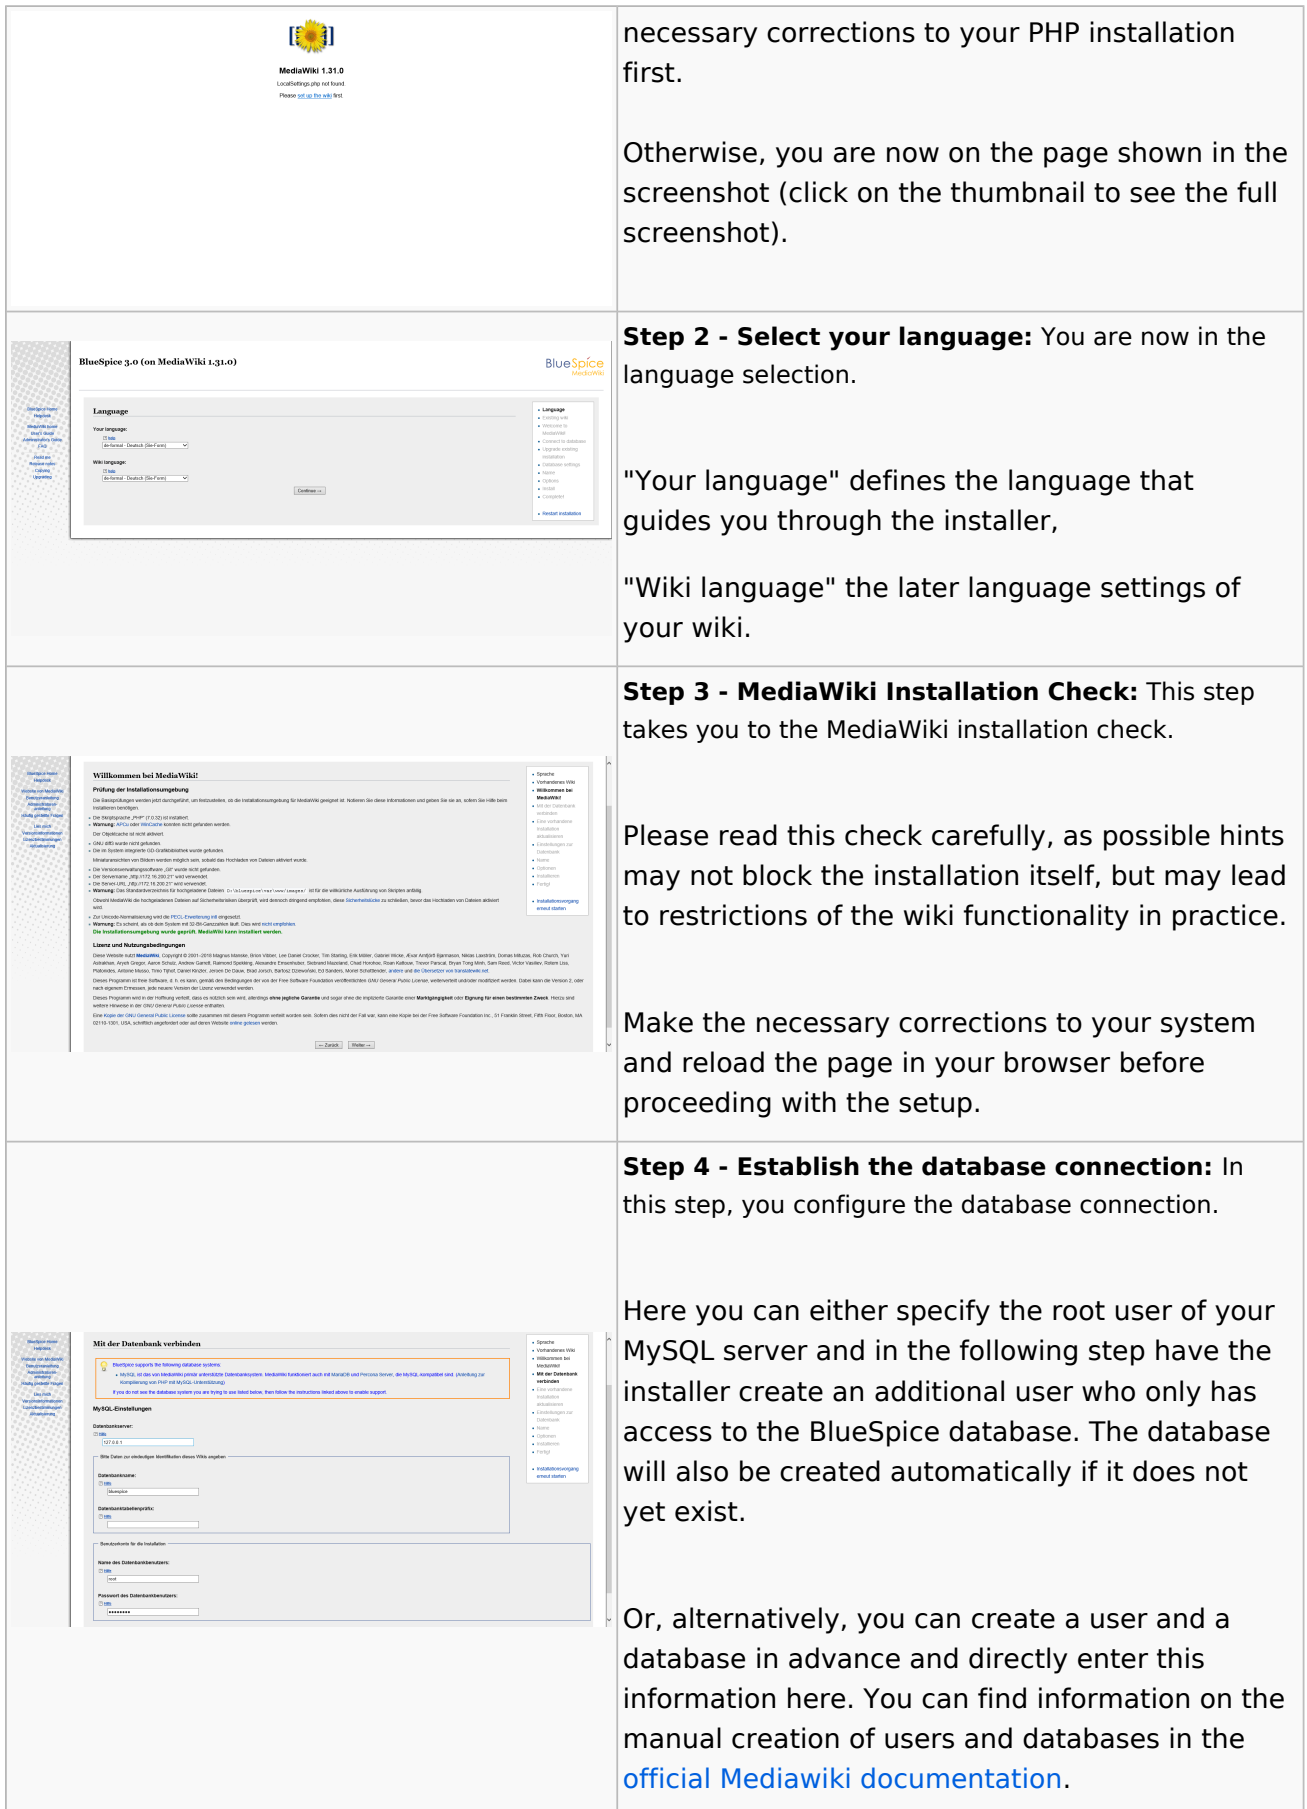

Step-by-step installation

If you also install the paid extension "BlueSpiceWikiFarm", make sure that the codebase is not located directly in the DocumentRoot of your web server or VirtualHost - it must be located in the /w subfolder!

Step 1 - Start the installation setup: First, open the URL of your web application in your browser. Then click on "set up the wiki" to start the installation.

Note: If you don't meet all necessary requirements for PHP yet, you won't be able to view this setup page yet. Please make the

	<p>Step 5 - Create the BlueSpice database user:</p> <p>Depending on the procedure you followed in the previous step, you can now define an exclusive user for your BlueSpice database.</p> <p>If you have already created the user explicitly for the database in advance, leave the check mark at "Use the same database account as during the installation process".</p>
	<p>Step 6 - Create your wiki name and administrator account: Enter the name for your wiki. This name is displayed in the title bar of your browser and in various other places such as in notification mails.</p> <p>Pay extra attention to the correct spelling, because this name can afterwards only be changed with a certain effort and certain risks.</p> <p>Next, enter the username, password and e-mail address of the first wiki administrator. The administrator account is then created by the wiki during setup.</p>
	<p>Step 7 - Options: In this step, you specify the e-mail address for notification e-mails.</p>
	<p>Step 8 - Installation: This step announces the installation of the wiki. If you don't need to make any changes to the previous steps, click "Next" to start the installation process.</p>

Run the script `..\maintenance\update.php` from the console.
