BlueSpice stores your content in a database for which you need to install a corresponding server. The steps listed here are required.

Introduction

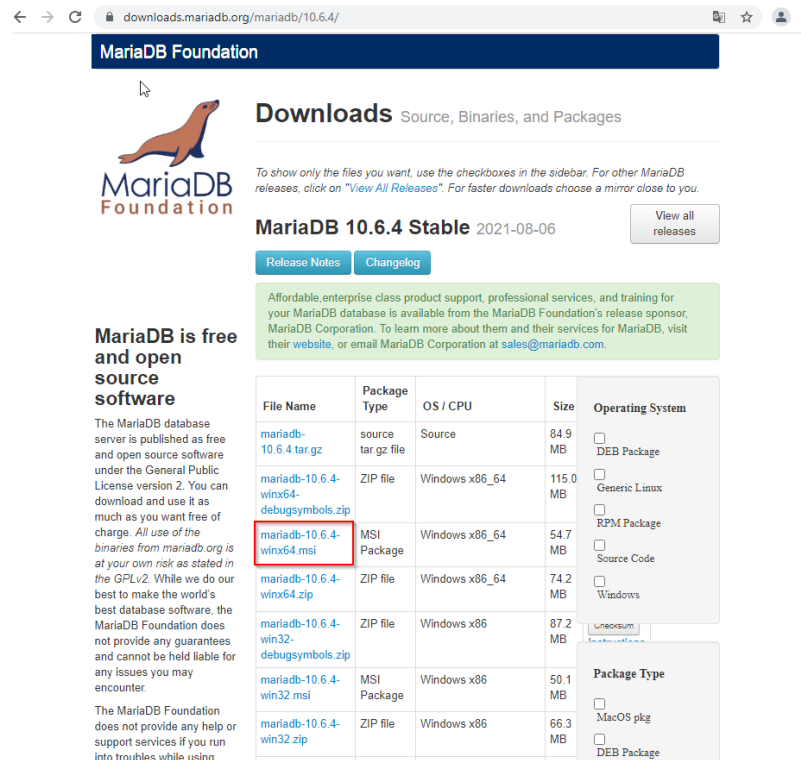

Alternatively, you can use MySQL at this point, but we recommend the database server MariaDB as described below.

Download

In Internet Explorer, open the [official download page](#) (1). Click on the corresponding download link (2).

Select the MSI package in the 64bit version:

MariaDB Foundation

Downloads Source, Binaries, and Packages

To show only the files you want, use the checkboxes in the sidebar. For other MariaDB releases, click on "View All Releases". For faster downloads choose a mirror close to you.

MariaDB 10.6.4 Stable 2021-08-06 [View all releases](#)

[Release Notes](#) [Changelog](#)

Affordable, enterprise class product support, professional services, and training for your MariaDB database is available from the MariaDB Foundation's release sponsor, MariaDB Corporation. To learn more about them and their services for MariaDB, visit their [website](#), or email MariaDB Corporation at sales@mariadb.com.

MariaDB is free and open source software

The MariaDB database server is published as free and open source software under the General Public License version 2. You can download and use it as much as you want free of charge. All use of the binaries from [mariadb.org](#) is at your own risk as stated in the GPLv2. While we do our best to make the world's best database software, the MariaDB Foundation does not provide any guarantees and cannot be held liable for any issues you may encounter.

The MariaDB Foundation does not provide any help or support services if you run into troubles while using

Follow the further download instructions and download the installation package to your hard disk.

Please note that the download on your Windows Server with Internet Explorer only works if you have configured the Internet Explorer Advanced Security Settings in the Server Manager. Please refer to the technical documentation from Microsoft.

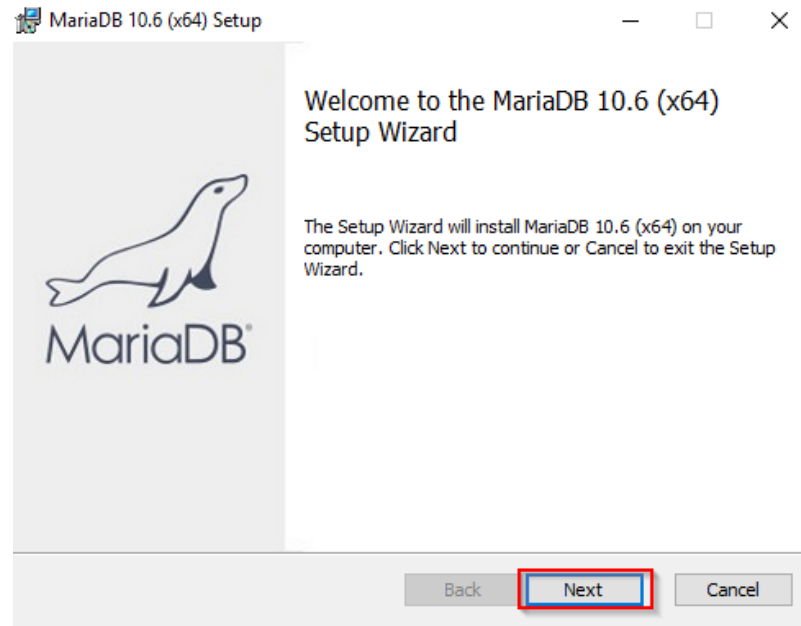

In the following the MariaDB version 10.3.13 is used and serves as an example only for the latest version, which you can download at the time of your installation.

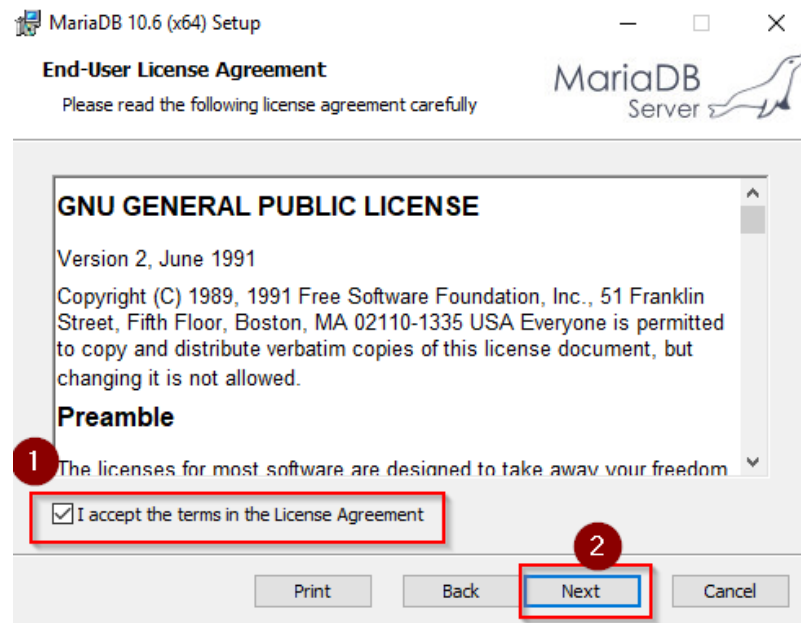

Installing MariaDB

Open the file that you just downloaded: "mariadb-10.3.13-winx64.msi".

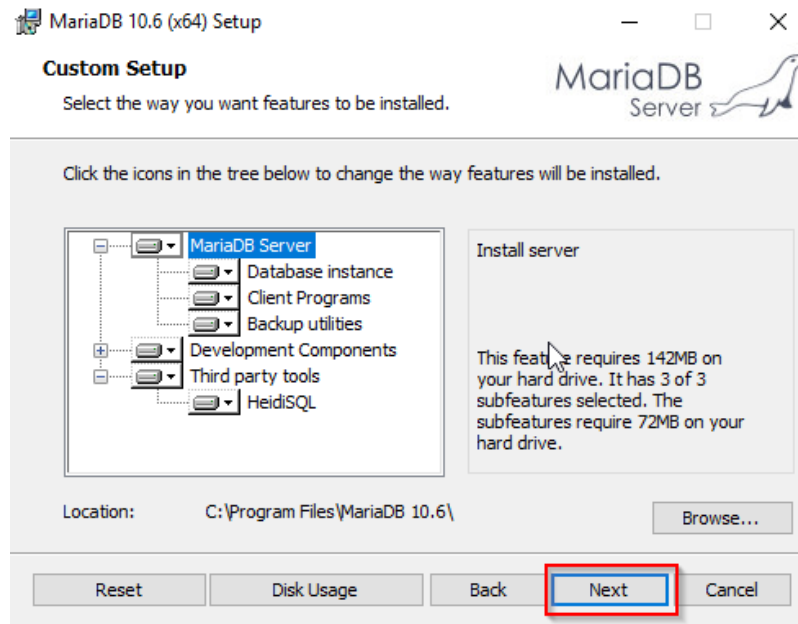

Start the installation by clicking "Next":

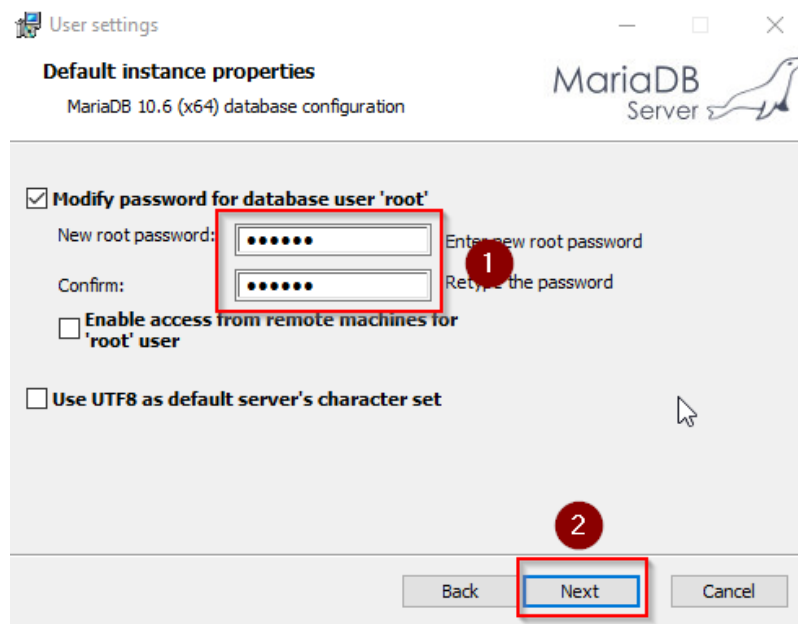

Confirm the license agreement (1) and click "Next" (2):

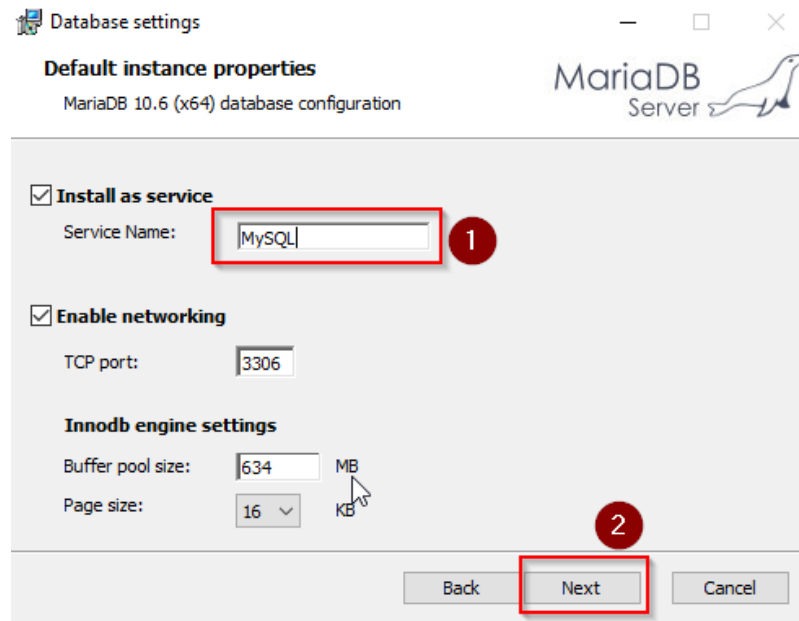

The next step you confirm by clicking on "Next".

Provide a password. It will be used for the administrative user ("root") of the database server (1). Then, click "Next" (2):

Confirm the next step by clicking "Next":

← Now start the installation:

Now start the installation:

When the installation is complete, exit the installer:

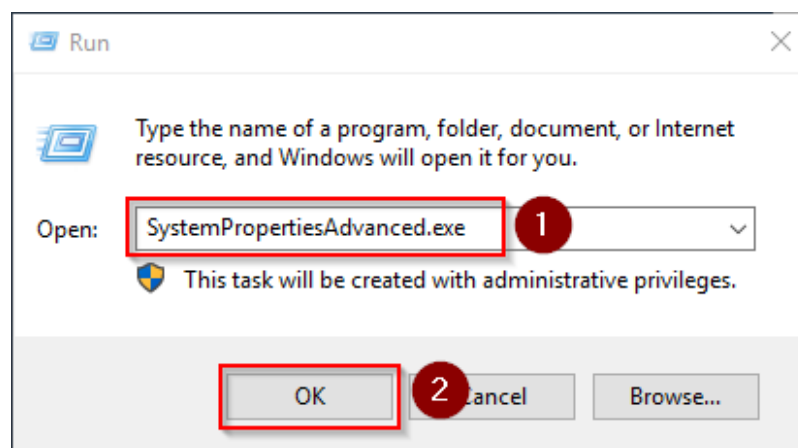

Setting the environment variable

To use MariaDB easily on the command line of Windows, it is necessary to configure an environment variable in Windows accordingly. To do this, perform the following steps:

Enter the key combination Windows + R.

In the following dialog, enter "SystemPropertiesAdvanced.exe" (1) and confirm with OK (2):

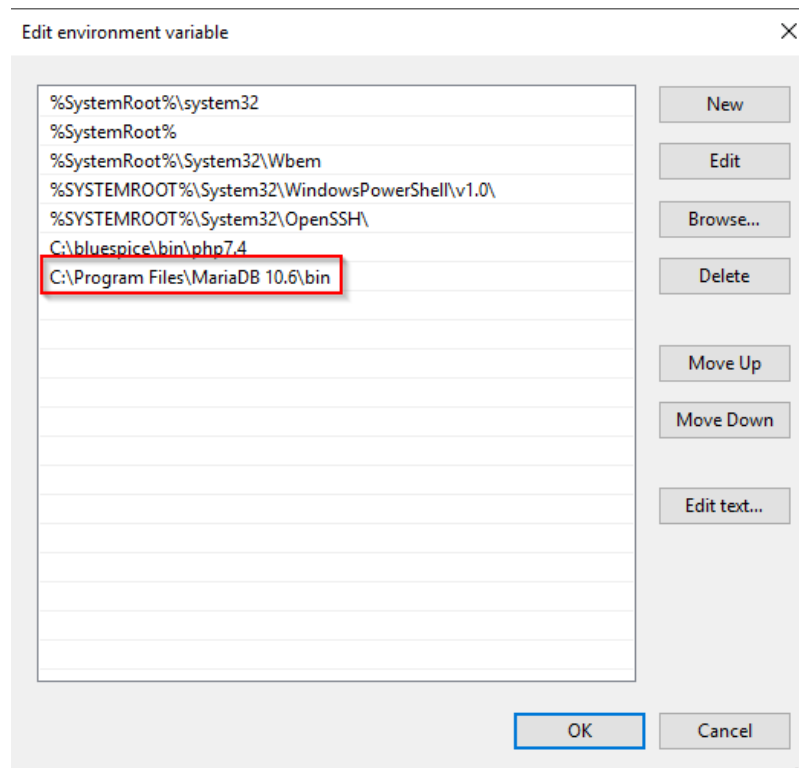

Click "Environment Variables":

In the bottom pane of the now opened window double-click on the line "Path":

Add the path to your installation of MariaDB, which contains i.a. the file mysql.exe is located. By default, this is the path `C:\Program Files\MariaDB 10.6\bin`.

Close all previously opened windows one after the other by clicking "OK".

Next step

If you have completed all steps successfully, you can delete the previously downloaded "mariadb-10.6.4-winx64.msi" file from your hard disk and continue to the next step "[OpenJDK](#)".
