1.5	Try it!	6

Preferences is an extension allowing wiki administrators to change key settings of the wiki, without resorting to scripts and manual settings in LocalSetting.php file. These settings are wiki-wide, although some of them can be overridden on user level through **UserPreferences**.

Technical background

Preferences lets you control and set various aspects of BlueSpice extensions.

Where can I find the Preferences function?

Firstly, you need to have administration permissions in order to call up Preferences. If you have the correct permissions, you will be able to see the link "Preferences" in the "Global settings" and then on "Preferences" as you see on the image below. Click on the link and you will be taken to the administration page.

The functionality of Preferences

The display shows different areas for the individual extensions.

Preferences page contains many sections that are represented by expandable tabs. By default all tabs are collapsed. More information on individual settings of each of these extensions you can find on those extension's pages.

For example:

BlueSpice - preferences

Setting	Description
Authors	Preferences for profile pictures.
Avatars	Size and defaults
Blog	Display of blog entries
BlueSpice	Special preferences for BlueSpice. You can also set which data formats allowed here (by default: png, gif, jpg, jpeg, doc, docx, pdf, xls).
