

Archive:DataValues Interfaces

DataValues Interfaces is a small PHP library that defines a set of interfaces for parsers, formatters and validators.

Contents

1	Requirements	2
2	Installation	2
2.1	Manual	2
3	[1]Tests	2

Requirements

PHP 5.5 or later

Installation

You can use [Composer](#) to download and install this package as well as its dependencies. Alternatively you can simply clone the git repository and take care of loading yourself.

Manual

Get the DataValues Interfaces code, either via git, or some other means. Also get all dependencies. You can find a list of the dependencies in the "require" section of the composer.json file. Load all dependencies and then load the DataValues Interfaces library by including its entry point: Interfaces.php.

[1]Tests

This library comes with a set up PHPUnit tests that cover all non-trivial code. You can run these tests using the PHPUnit configuration file found in the root directory. The tests can also be run via TravisCI, as a TravisCI configuration file is also provided in the root directory.
