Features

Additional input types for Semantic Forms

Description

Semantic Forms Inputs is an extension to MediaWiki that provides additional input types for [Semantic MediaWikis](#) that use the [Semantic Forms](#) extension.

The Semantic Forms extension allows users to add, edit and query data of a Semantic MediaWiki using forms. For every form field the input type specifies the type of input a field will have in the form. Semantic Forms comes with basic input types for all data types. This extension -- Semantic Forms Inputs -- aims to collect further, optically and/or functionally enhanced input types.
