

## Reference:Widgets

### Extension\: Widgets

Overview			
<b>Description:</b>			Integration of external content from social media sites
<b>State:</b>	stable	<b>Dependency:</b>	MediaWiki
<b>Developer:</b>	Sergey Chernyshev, Yaron Koren	<b>License:</b>	-
<b>Type:</b>	MediaWiki	<b>Category:</b>	Rich Articles
<b>Edition:</b>	BlueSpice pro	For more info, visit <a href="#">Mediawiki</a> .	

### Features

---

The **Widgets** extension allows the creation of raw HTML pages that can be embedded (similarly to templates) in normal wiki pages. You do this by creating pages in the *Widget* namespace. They avoid the security problems of raw HTML in editable wiki pages because the privilege to edit in the Widget namespace is managed. Many pre-written Widgets are available.

### Usage

---

To add a widget to your MediaWiki installation, just create a page in the Widget: namespace and then use the  `{{#widget:...}}`  parser function to include it in the pages of the wiki.
