State:	stable	Dependency:	MediaWiki
Developer:	Sergey Chernyshev, Yaron Koren	License:	-
Type:	MediaWiki	Category:	Rich Articles
Edition:	BlueSpice pro		
For more info, visit Mediawiki .			

Features

The **Widgets** extension allows the creation of raw HTML pages that can be embedded (similarly to templates) in normal wiki pages. You do this by creating pages in the *Widget* namespace. They avoid the security problems of raw HTML in editable wiki pages because the privilege to edit in the Widget namespace is managed. Many pre-written Widgets are available.

Usage

To add a widget to your MediaWiki installation, just create a page in the Widget: namespace and then use the `{{#widget:...}}` parser function to include it in the pages of the wiki.
