Extension\: Cite

Overview			
Description:	Allows a user to create footnotes by using a special tag		
State:	stable	Dependency:	MediaWiki
Developer:	Ævar Arnfjörð Bjarmasont	License:	-
Type:	MediaWiki	Category:	Rich Articles
Edition:	BlueSpice free, BlueSpice pro		
For more info, visit Mediawiki .			

Features

Cite is an extension which allows a user to create footnotes. This is very useful to place comments or citation at the bottom of the page.

Technical background

Cite is a free MediaWiki extension. With a special [tag](#) you can integrate references/footnotes.

Where do I find this function?

If the Reference-Tag `<ref>` was used, you can see a superscripted number (as a link) immediately following that portion of the text the note is in reference to. If you click on the number (link) you will be forwarded to the references at the bottom of the page.

Functionality of Cite

Create footnotes

To create footnotes you have to use the `<ref>`-Tag in the wiki code. Insert the ref-tag right after the text section it belongs to. Then insert the comment and close the reference with `</ref>`. Instead of a comment you will see a the text flagged with a a superscripted number.

At the end of an article you have to insert the tag `<references/>`. Here all the comments you made will be shown.

Example of footnotes in the wiki code

Working with Wikis `<ref>`Wikis allow users not just to read an article but also to edit`</ref>`,
It is very useful to use footnotes `<ref>`A note can provide an author's comments on the r

```
==References==  
<references/>
```

Footnoes as you see them in the "view"-mode

Working with Wikis ^[1]is fun.

It is very useful to use footnotes ^[2] in the articles.

References
