State: stable	**Dependency:**	MediaWiki
Developer: Jeroen De Dauw	**License:**	-
Type: MediaWiki	**Category:**	Infrastructure
Edition: BlueSpice pro		
For more info, visit **Mediawiki.**		

Features

OOP interface for creating parser hooks in a declarative fashion

This is a PHP library for MediaWiki extensions. It does not in itself add or enhance functionality of your wiki.

Requirements

- PHP 5.3 or later (including PHP 7)
- MediaWiki 1.16 or later

The latest versions (1.6+) requires more recent PHP and MediaWiki. If that does not work for you, just stick with version 1.5, which has no known defects and does not miss any real features.

- PHP 5.5 or later (including PHP 7.x)
- MediaWiki 1.27 or later

[1]Installation

You can use Composer to download and install this package as well as its dependencies. Alternatively you can simply clone the git repository and take care of loading yourself.
