Features

Reminder - Quality assurance with resubmission!

Summary

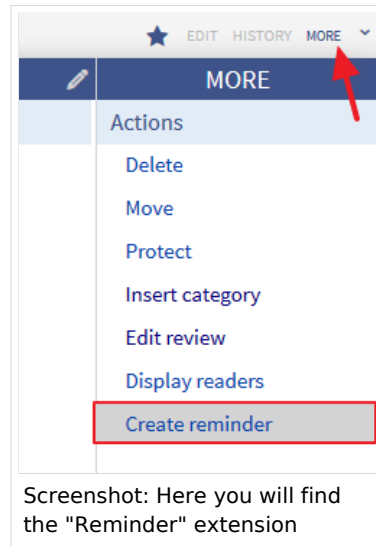

The extension **Reminder** allows users to get an overview of the actuality of those pages in a wiki they are responsible for. For this, **Reminder** offers a function to set a certain date when the user will be reminded to revise an article.

At a glance\[: Advantages

- Simple use
- Possibility to mark an article automatically as *expired*
- Simplified quality assurance through active reminders via email and within the wiki

Where do I find Reminder?

Open the [Archive:Widgetbar](#) by clicking on *More* in the upper right corner of the article. Here you will find the entry *Create Reminder*, which will open a pop-up window for **Reminder**.

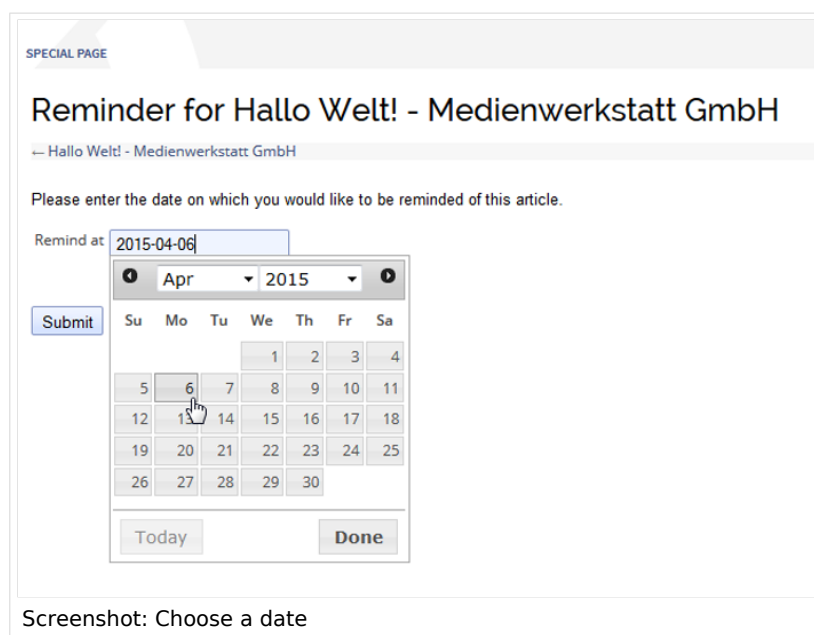

Screenshot: Here you will find the "Reminder" extension

How do I use Reminder? (Step-by-step)

Step 1: Open the Widgetbar of the respective article you want to create a reminder for, and click on *Create Reminder*.

Step 2: In the pop-up window, enter the desired date when you want to be reminded of the article. Per default, this date is set 6 months in advance, but you can change this by clicking on the input box.

Screenshot: Choose a date

Step 3 (optional): If you want the article to be marked as *expired* when the reminder date is due, check the respective box.

Hint: Marking an article as *expired* not only gives the user a better insight whether the contents shown are up-to-date or not, it also simplifies **managing your set reminders**.

Screenshot: Checkbox for the "expired" mark

Step 4: Click on *Save*. This will add the reminder to your personal list of already set reminders.

Features of Reminder

Overview of all reminders

You can view all your set reminders on the special page `Special:Reminder`. There you will find a list of articles with corresponding reminders. The list can of course be sorted and filtered.

Change or delete existing reminders

If you want to change or delete an existing reminder, you can do this on the special page `Special:Reminder` as well.

Step 1: Mark the reminder you want to edit or delete by clicking on it. Please make sure that you don't click on the link to the article itself, to avoid being forwarded to the article.

Step 2: To change a reminder, move your mouse over the marked line. Under *Actions* you will find buttons to edit and delete the reminder.

Alternatively you can delete the highlighted reminder by clicking on the red *Delete* icon on the top left of the list.

Expiry marking

If the option *Article will expire on reminder* was checked during creation of the reminder, the article will be marked as *expired* the day the reminder is due. You will see an icon with a respective statement in the **Statebar** of the article.

In the detail view of the statebar, you will also find the entry *Article is still up to date (unexpire this article)*. Click on this link if you have finished revising the article, or if you think that all presented content is up-to-date. This not only removes the "expired" marking, but also deletes the corresponding reminder.

Administration

How can I adapt Reminder?

Administrators can change the following settings in the *Preferences* tab:

- **Set article by default to "Article expired" when a reminder is created**
- **Default reminder period**
- **Set reminder on article creation**

These settings can also be changed by the user in the personal user settings under the tab *BlueSpice*.

Which rights are needed to use Reminder?

To use **Reminder**, users at least need editing rights.

The BlueSpice extension **Reminder** is part of [BlueSpice pro](#). It can also be purchased as a single extension in the [BlueSpice Shop](#).
