What is Signhere?

SignHere allows you to quickly sign off a wiki article.

How to add Signhere?

The first screenshot shows the edit interface of a MediaWiki page titled "TestPage". The left sidebar contains a navigation menu with "ADMINISTRATION" expanded, showing options like "Assignment management", "Category manager", "Extensions", "Group manager", "Interwiki links", "Namespace manager", "Page templates", "Permission manager", "Preferences", "Skin", and "User manager". The main editing area shows the page content with the following text:

```
BlueSpice free is the gratis version for an entry level solution for businesses. It provides a functional added value for wiki admins and users. Download this basic BlueSpice version on sourceforge for free.

```

The text is formatted with bold tags. The "Signatures" section is highlighted with a blue circle. Below the text, there is a "Summary:" field and a "Save page" button, which is also highlighted with a blue circle.

The second screenshot shows the rendered page. The "Signatures" section is now visible as a heading, and the "Signatures" button is highlighted with a blue circle. The page content is rendered with the same formatting as in the first screenshot.

The third screenshot shows the page after a signature has been added. The "Signatures" section is now populated with a signature: "WikiSysop (Diskussion) 14:30, 21. Mär. 2018 (CET)". The "Signatures" button is still highlighted with a blue circle.

Functionality

- There is bs:signhere tag
- When this tag is added to a page, a field to add a signature appears
- When clicked, this field will generate a signature above itself

Visibility

Will be shown in view mode of an Article. Everyone with edit right will be able to sign.

Sorting

Signatures appear in the order they were added.

Scaling

All signatures will always be shown.

Restrictions

Question of forgery was discussed. Reason is that signatures will be added as text, and therefore could be edited by other users. This is not obvious at first glance (while reading). However, every change will be visible in the log. So it can be known for sure, if the signatures have been changed after the fact.
