## What is TopMenuBarCustomizer?

**TopMenuBarCustomizer** provides the possibility to customize the top menu links.

The TopBarMenuCustomizer extension displays an editable top bar menu. It allows a ( single-stage ) drop-down.

## Where to find the function?

As shown in the image above the TopBar menu is found at the top of the page. If you want to edit the TopBarMenu, enter `'yoururl'/MediaWiki : TopBarMenu` in the browser bar. This will redirect you to the TopBar menu page containing the TopBar menu's text. MediaWiki namespace access permissioning is required.

## The functionality of ...

Links are created as follows:

- System title (mandatory)
- URL: Urls can be pages in MediaWiki (e.g. Main\_Page; HQ:Testpage) as well as external links (e.g. <http://google.com>).
- Display title: In case there is no display title, the system title will be shown.

Convention for links at first level:

```
* System title|Url|Display title
```

There can be maximum 5 entries on the first level.

Convention for links at second level:

```
** System title|Url|Display title
```

There can be maximum 25 entries.

Example:

```
* Wiki|Wiki
* Blog|Blog
* Homepage|BlueSpice Homepage|http://www.blue-spice.org
* Social Network|Social Network|http://www.facebook.com/BlueSpice.for.MediaWiki
```

---

## Tips for working with

---

If the page MediaWiki : TopBarMenu has as yet not yet been created then the entries " Wiki " and " blog " are displayed.
