What is ExportTables?

ExportTables supplements tables with the option to save them with one click into other formats, eg. MS Excel, to export.

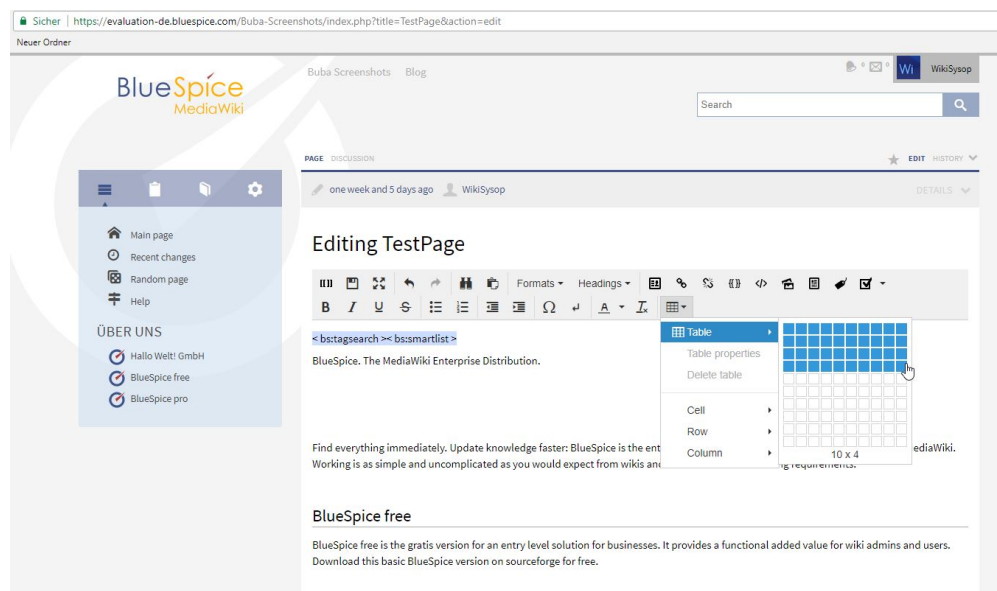

How does ExportTables work?

If the Extension ExportTables is installed, you can assign tables the additional property "Exportable". This allows you to open the table in read-only mode with a mouse click in other formats.

Where to find ExportTables?

In the WYSIWYG editor

In Edit mode, click on a table and expand the Formats button in the WYSIWYG editor.

The entry "Table" opens another menu in which you select the last entry "Exportable". The selected points are orange indicated.

The image contains two screenshots of the BlueSpice MediaWiki interface, showing the 'Editing TestPage' view. Both screenshots show the same content, but the second one has a blue circle highlighting the 'Exportable' option in the table toolbar.

Top Screenshot: The interface shows the 'Editing TestPage' view. The table toolbar is visible, and the 'Exportable' option is highlighted with a blue circle.

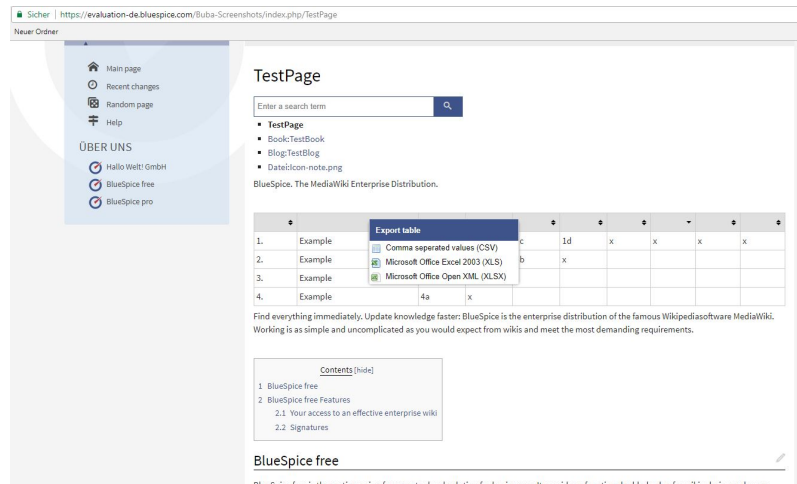

Bottom Screenshot: The interface shows the 'Editing TestPage' view. The table toolbar is visible, and the 'Exportable' option is highlighted with a blue circle.

Table Content:

1.	Example	1a	1b	1c	1d	x	x	x	x
2.	Example	2a	2b	3b	x				
3.	Example	3a	3b	x					
4.	Example	4a	x						

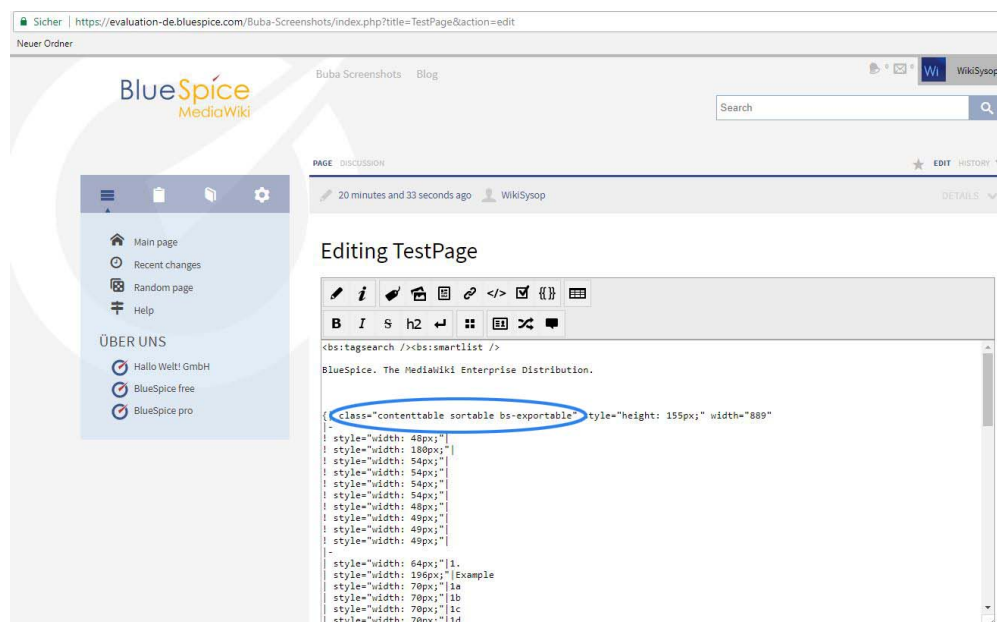

Find everything immediately. Update knowledge faster: BlueSpice is the enterprise distribution of the famous Wikipediasoftware MediaWiki. Working is as simple and uncomplicated as you would expect from wikis and meet the most demanding requirements.

After saving, the table has the additional property that you can export it to other formats (right click on the table).

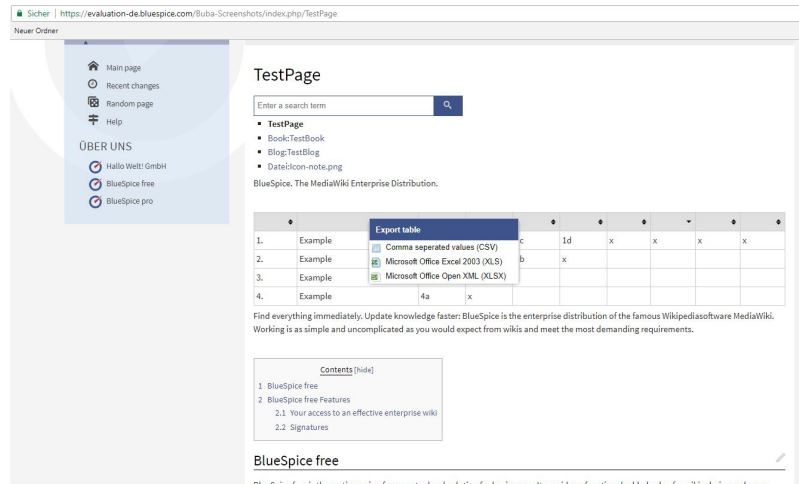

In the wiki code

You can also quickly and easily export a table in the wiki code. Add the `bs-exportable` attribute to the table tag:

Perform ExportTables

In the read mode of the article in which the exportable table is located, right-click on the table and the following selection window opens:

Here you can choose the desired format and save or open the table in this format.

To remove the function from a table, you must go to the wiki code and delete the "bs-exportable" attribute from the start of the table.
