What is Pastelmage?

Pastelmage allows users to include images in an article, either via Drag&Drop, or by copying it from the clipboard.

No complicated code necessary.

Where to find Pastelmage?

Pastelmage is integrated in the edit mode of the wiki. Every time an image is pasted or dropped into one of the two editors, Pastelmage is automatically loaded and provides you a special window to enter further data.

How to use Pastelmage? (Step-by-step)

Note: Please see the entry Technical background for system requirements and compatibility!

Option 1: Via Drag & drop

- **Step 1:** Open the respective wiki article in edit mode.
- Step 2: Open your Explorer and choose the picture you want to add to your article.

Step 3: Drag and drop the picture into your editor window. A separate window will pop up where you can enter additional information and credentials.

Option 2: Via Copy & Paste

Step 1: Open the respective wiki article in edit mode.Step 2: Open your Explorer. Right click on your image, then "edit".

Then copy you image (Ctrl + C), go to your wiki article, move your mouse cursor to the spot in the editor where you want to insert the image and paste image (Ctrl + V):

Features of Pastelmage

Additional data

When inserting the image, a pop-up window appears, allowing you to add the following information to the image:

- The **categories** the image can be found in
- A summary description that will appear on the file page of the image
- The **license** the image is under. Note: make sure that you only upload images you are allowed to!
- Furthermore you can place the image on a **watch list**, so you will always be informed about future changes of the image.

Further editing of images

After inserting an image with Pastelmage, you can of course modify it further (resizing, adding alttext or links, etc.) via the normal functions of your chosen editor.

Administration

BlueSpice

How to adapt Pastelmage?

Administrators can change the following settings in the preference tab Pastelmage:

- Default File Extension if none provided
- Activate Java Applet (This setting can also be activated or deactived by the user in the personal user settings under the tab *BlueSpice*)

Browser compatibility

Pastelmage is tested and ready-to-use for

- Firefox version 22 and higher
- Internet Explorer version 9 and higher
- Chrome version 13 and higher

Please note: Chrome stopped supporting Java from version 43, so "Copy & Paste" is also not supported anymore. Other features however are not affected.

Troubleshooting

BlueSpíce

MediaWiki

• Application blocked for security reasons

If the applet is blocked for security reasons, you can add your wiki to the Exception Site List (required: Java 1.7.0_51 or higher):

Step 1: Open your system settings and click on "Java".

	Import	Export Re	emove	Details			
				Decomo			
					Clas		
					CIOS		
					Clos	- 3	X

Please note: regardless of your Java version, always restart your browser for the changes to take effect!

• Stop the applet from asking if you want to execute it

To stop Java from asking you if you want to execute this applet, you need to import the certificate as described above. In addition to that, with Java version 1.7.0_51 or higher, you need to add your wiki to the trusted sites (as described above).

If all is correct, you see the following window:

	Name:	PasteImage	
S	Publisher:	HalloWelt! - Medienwerkstatt GmbH	
	Location:	http://localhost	
ormation at risk	Run this applicat	ion only if you trust the location and publisher above.	

To stop Java asking for permissions for this applet, check the checkbox on the left hand side.

The BlueSpice extension **Pastelmage** is part of BlueSpice pro. It can also be purchased as a single extension in the BlueSpice Shop.
