Archive:DocumentManager

Contents

Description

DocumentManager for BlueSpice provides a clear interface for all files uploaded in the wiki and facilitates the administration and processing of these documents.

Usage / Features

The functionality of the DocumentManager is split into DocumentManager WebDAV and DocumentManager FileRepo. These two functions are not interdependent, but are partly conditional. Since Release 2.27.0 FileRepo is included in BlueSpice pro by default. WebDAV is an additional configuration, so it can be booked separately via offer and commission.
