Description

InsertLink offers a dialogue to insert links without using the wiki code.

Usage / Features

If you are already in the edit mode, you find the function "InsertLink" in the wiki code editor and in the WYSIWYG editor. Click on the link button to open the dialogue. If you want to delete a link please use the red button next to it.

Users can link:

- To other wiki pages.
- To wiki pages in specific namespaces.
- To external websites.
- To other wikis (e.g. Wikipedia articles).
- To files on other drive.

These functions do not just save you time working with wiki code, but also present you with a list of existing articles in the wiki for you to choose from. If the page you are trying to link to doesn't exist (yet) a red note will be shown.

Technical information

Configuration

Some aspects of this extension can be configured on Special:BlueSpicePreferences, under section "Insert link". Here wiki administrators can configure:

- Whether to enable Java applet.

Rights (permissions)

This extension does not require any special rights. Users must have "edit" permission to be able to insert a link.

Requirements

InsertLink requires [BlueSpiceFoundation](#).

User manual
