Description

UniversalExport enables the single page export to PDF.

BlueSpice has an interface for exporting various types of content into differing data formats.

Usage / Features

The export is executed taking into account the settings (parameters, tags). The extension UniversalExport gives you an easy way to export information from the wiki. It checks permissions, collects the parameters and metadata of the entities to be exported, providing the context for the Export Module.

Technical information

Configuration

Some aspects of this extension can be configured on Special:BlueSpicePreferences, under section "Universal export". Here wiki administrators can configure:

- Default metadata (JSON format).
- Override metadata (JSON format).

Please see [UEModulePDF](#), [UEModuleHTML](#) and [UEModuleBookPDF](#) for configuration of individual modules of UniversalExport.

Rights (permissions)

Users must have "universalexport-export" permission in order to execute the export.

Requirements

UniversalExport requires [BlueSpiceFoundation](#).

User manual

For detailed description and usage please visit our [user manual](#).
