System requirements

The installation of Node.js under Windows can be done via [Git](#). Alternatively, the installation package can be obtained directly from [NodeJS](#). During the installation you have to make sure to install the Node Packet Manager NPM as well.

Under Debian/Ubuntu Nodejs and NPM can be installed as follows:

```
apt install npm  
npm -g install npm@latest
```

Download Node.js for Windows

Download the current package of Node.js from the [Project website](#). Please use the 64bit version if possible.

Installation of Node.js

Install Node.js into the *|bluespice|bin|nodejs* folder using the default settings of the installer. When selecting this folder, be sure to pay attention to our instructions on the page [Folder Structure under Windows](#), which we apply in this complete installation manual.

Open a console with administrator rights and change to the installation directory of NodeJS (usually C:\Program Files (x86)\nodejs). Execute the following commands there:

```
npm install --global --production windows-build-tools  
npm -g install npm@latest
```
