

Manual:Extension/BlueSpiceFlaggedRevsConnector

Quality management overview page

The page *Special: Quality management overview* allows users with *reviewer* permissions to view the revision status of all wiki pages. The following information is available:

- **Page title:** Name of the page, including namespace prefix.
- **State:** The approval status of the page. Unless the possible states of a page have been customized via server settings, the following states are shown:
 - *First draft:* The page has never been approved
 - *Draft:* The page has been approved before and now has a draft version
 - *Approved:* The page has been approved and currently has no draft version:
 - *Implicit Draft:* The page has been approved and there are changes to embedded resources (such as templates, embedded PDFs or images)
 - *Not enabled:* By default this state is not included, but can be added via the filter options of the table header row. It shows all pages that do not have the acceptance feature enabled.
- **Page categories:** Shows the assigned categories to allow filtering of the table by category.
- **Revisions since stable:** By default, this column is deactivated in the column filter. For draft versions it shows the number of revisions for the latest draft.

Tip: To filter the pages by namespace, use the filter option of the page title column and enter the namespace prefix as your filter string.

	State	Page categories
	First draft	Sort Ascending
	Implicit draft	Sort Descending
	Implicit draft	Columns >
	Implicit draft	Filters >
	Implicit draft	BlueSpice Cloud
	First draft	Manual
	First draft	
	First draft	Manual
	Implicit draft	Editing
