BlueSpice

The source code of BlueSpice is based on the scripting language "PHP". It must be installed on your server in order to operate BlueSpice. The steps listed here are required.

Introduction

PHP is not installed with a "classic installation package", but the sources are downloaded and integrated in IIS via the previously installed PHP Manager.

Downloading PHP

In your browser, open the official download page for Windows on php.net (1). Find the latest version 7.3.x (2) 64-bit (3) Thread-Safe (4) and download it here (5):

C C C C C C C C C C C C C C C C C C C	load 0 = â d 5each	- ۵۰ ۵۵

PHP For Windows This site is dedicated to supporting PHF on Microsoft Windows. It also supports ports of PHP extensions or features as well as providing special builds for the various Windows architectures.	Inder Commence Grandinge Binaries and Sources Selectes Select an option to direct acces ✓	
If you like to build your own PHP binaries, instructions can be found on the <u>Wriki</u> .	Dwwnlead source code [25.6648] VCL5 x64 Non Thread Safe (2019-Mar-07 01:55:08) • 20 (24.248)	
PECL For Windows PECL extensions for Windows Is being worked on. Windows DLL can be downloaded right from the PECL website.	sha256: 551h2794cdb373d9591dbc25429bb34c468482837d26e60332618e5630b6 • Debug Pack [22.88H6] sha256: 05552bb3339e22413c5ce63308a6ecd76d910cf110c8b9944b5f06c231adf0e 3 4	
The PECL extension release and snapshot build directories are browsable directly.	VC15 [c61 [hread Safe] 2019-Mar 07 01:55:24)	

Follow the download instructions.

Please note that the download on your Windows Server with Internet Explorer will only work if you have configured the Internet Explorer Advanced Security Settings in the Server Manager. Please refer to the technical documentation from Microsoft.

The following is PHP version 7.3.3 and is only an example of the latest version 7.3.x that you can download at the time of your installation.

Unzipping the ZIP archive

Unzip the ZIP archive just downloaded into a useful system path on your hard drive.

This documentation assumes the recommended folder structure.

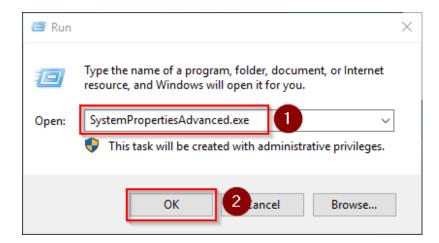

For this reason PHP will be unpacked into the folder C:\bluespice\bin\php-7.3.3. If you have a different folder structure, you must adapt these paths accordingly.

Setting the environment variable

In order to use PHP easily on the command line of Windows, it is necessary to configure an environment variable in Windows accordingly. To do this, perform the following steps:

Enter the key combination Windows+R.

In the following dialog enter "SystemPropertiesAdvanced.exe" (1) and confirm with OK (2):

Click "Environment variables":

System Properties	\times
Computer Name Hardware Advanced Remote	
You must be logged on as an Administrator to make most of these changes Performance	
Visual effects, processor scheduling, memory usage, and virtual memory	
Settings	
User Profiles	
Desktop settings related to your sign-in	
Settings	
Startup and Recovery	
System startup, system failure, and debugging information	
Settings	
Environment Variables	
OK Cancel Apply	

In the lower part of the now opened window double-click on the line "Path":

ironment Variables	
ser variables for Administrator	
Variable	Value
Path	C:\Users\Administrator\AppData\Local\Microsoft\WindowsApps;
TEMP	C:\Users\Administrator\AppData\Local\Temp
ТМР	C:\Users\Administrator\AppData\Local\Temp
ystem variables	New <u>E</u> dit <u>D</u> elete
Variable	Value
ComSpec	C:\Windows\system32\cmd.exe
DriverData	C:\Windows\System32\Drivers\DriverData
NUMBER_OF_PROCESSORS	1
05	Windows_NT
Path	C:\Windows\system32;C:\Windows;C:\Windows\System32\Wbem;
PATHEXT	.COM;.EXE;.BAT;.CMD;.VBS;.VBE;.JS;.JSE;.WSF;.WSH;.MSC
PROCESSOR ARCHITECTURE	AMD64
	Ne <u>w</u> Ed <u>i</u> t De <u>l</u> ete

Click "New":

%SystemRoot%\system32	<u>N</u> ew
%SystemRoot%	
%SystemRoot%\System32\Wbem	<u>E</u> dit
%SYSTEMROOT%\System32\WindowsPowerShell\v1.0\	
%SYSTEMROOT%\System32\OpenSSH\	<u>B</u> rowse
	<u>D</u> elete
	Move <u>U</u> p
	Move D <u>o</u> wn
	Edit <u>t</u> ext

Add the path to your unpacked PHP version, which contains the php.exe file:

Edit environment variable		×
%SystemRoot%\system32		New
%SystemRoot%		
%SystemRoot%\System32\Wbem		<u>E</u> dit
%SYSTEMROOT%\System32\WindowsPowerShell\v1.0\		
%SYSTEMROOT%\System32\OpenSSH\		<u>B</u> rowse
C:\bluespice\bin\php-7.3.3		
		<u>D</u> elete
		Move <u>U</u> p
		Move D <u>o</u> wn
		F 19 1 1
		Edit <u>t</u> ext
	ОК	Cancel

Close all newly opened windows one after the other by clicking on "OK".

Checking the environment variable

To make sure the environment variable is set correctly, perform the following steps:

Enter the key combination Windows+R.

In the following dialog, enter "cmd" (1) and confirm with OK (2):

At the command prompt, type "php -v" (1) and press the Enter key. The found PHP version will be displayed (2).

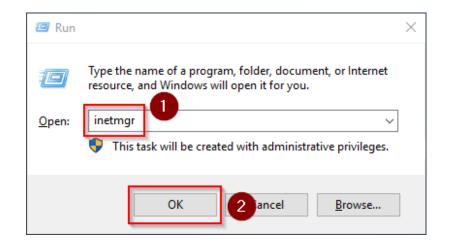

If this is not the case, then the path to the php.exe file in the environment variables was incorrectly specified.

Configuring IIS for PHP

In the following steps, PHP will be included in IIS and IIS will be configured to provide a working basic setup:

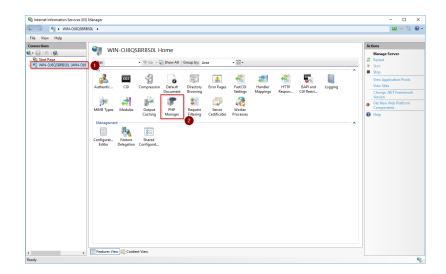

First, call IIS Manager. To do this, enter the key combination Windows+R.

In the following dialog, enter "inetmgr" (1) and confirm with "OK" (2):

In the left pane, select your server name (1) and then double-click "PHP Manager" (2):

Click "Register new PHP version":

In the following window select the browse "(...)" button:

Register new PHP ve	ersion			?	×
Provide a path to t	he php executable file	(php-cgi.exe):			
Example: C:\PHP\	php-cgi.exe				
		0	K	Cancel	

To manage the PHP settings in the next window:

Change to the path to which you previously unzipped PHP (1), mark the "php-cgi.exe" (2) and confirm the dialog with "Open" (3):

Select PHP executable file X
