

Manual:Extension/BlueSpiceHideTitle

A [quality version](#) of this page, [approved](#) on *5 March 2021*, was based off this revision.

In some cases, it makes sense to hide the title of a page. For example, if you want to create a portal page. The extension *HideTitle* provides this feature for the wiki.

Usage

In [VisualEditor](#), go to *Page options* > *Advanced settings*.

Set the title visibility to *Hide* and Save the setting. This adds the magic word `__HIDETITLE__` in the source code, usually at the top of the page. After saving the page, the page title is hidden in view mode.
