

Configuration

All changes have to be made in `LocalSettings.php`!

Contents

1	Activate upload	2
2	Activate file: protocol	2
3	Set default settings	2
3.1	Set default timezone	2
3.2	Enable subpages in main namespace	2
3.3	Open external links in new window	2
4	Download this!	2

Activate upload

```
$wgEnableUploads = true;
```

Activate file: protocol

```
$wgUrlProtocols[] = 'file://';
```

Set default settings

Set default timezone

This example is for Europe/Berlin!

```
# Set default time zone offset for new users
$wgLocalTZoffset = date("Z") / 60;
# Use this time zone in signatures
$wgLocaltimezone = 'Europe/Berlin';
# Set default time zone offset for new users
$wgDefaultUserOptions['timecorrection'] = 'ZoneInfo|' . (date("I") ? 120 : 60) .
'|Europe/Berlin';
```

Enable subpages in main namespace

```
$wgNamespacesWithSubpages[NS_MAIN] = true;
```

Open external links in new window

```
$wgExternalLinkTarget = '_blank';
```

If you still have questions take a look a this [FAQ](#) (German only at the moment)
