What is ExtensionInfo?

ExtensionInfo creates a special page with basic information about loaded extensions of a wiki: extension name, description, version or status.

Where to find ExtensionInfo?

The list of all extension in the admin area. Only visible for users with administration rights.

Functionality

Next to a list of extension names you will find the following information:

- Description: a short description of the extension's functionality.
- Version: here you can see the version.
- Status: information about the level of development (alpha / beta / stable).

Administration

If you install a new extension it will be listed in the ExtensionInfo automatically. Further administration is only possible right now in the script path: `(/bluespice-mw/config/extension-settings.php)`

Note: In the special page `Spezial:Version` there is an overview as well.
