## Available tags

Choose tag or magic word	Description
countusers	<ul> <li>Shows automatically generated lists of articles. The</li> </ul>
countfiles	configuration works through several modi and parameters.
countcharacters	Examples
Page access	Mode: Recent changes <bs:smartlist <="" count="7" new="true" ns="104" td=""></bs:smartlist>
Tag cloud	trim="false" />
tagsearch	Mode: What links here <bs:smartlist <="" mode="whatlinkshere" td=""></bs:smartlist>
signhere	target="ARTICLENAME" />
smartlist	See also
newbies	http://cit.mit.bucepice.com/mit/reference.omaiter
toplist	

The extension SmartList offers three different tags:

- <bs:smartlist /> display a list of pages based on different criteria
- <bs:newbies /> display a list of recentrly registered users
- <bs:toplist /> display a list of most visited pages

All of the tags listed above can be added through the menu *Insert > Magic word* in VisualEditor. For more information on how to insert magic words, see InsertMagic.

## Parameters

The SmartList can be limited or extended with the following parameters:

Label	Parameter	Values	Description
Count	count	number	The number of articles to be shown. Default value: 5
Namespace (s)	ns	number or name	Only articles from given namespace will be listed. The namespaces can be entered by IDs or by names. Several namespaces can be named with pipes: ns="0 2 5" or ns=" Help User Test". Default: All namespaces are included.
Category	cat	name	Only articles from given category will be listed. Selecting several categories is not possible. Default: All categories.
Category mode	catmode	AND, OR	Show pages if they are in at least one of the categories (OR) or show pages if they are tagged with all categories (AND).
Show minor	minor	true, false	Minor changes (changes marked with an "m" in the recent changes) will not be listed. Default: Minor changes are listed.

Period	period	-, month, week, day	Only changes within given period are shown. Default: No limit.
Show only new articles	new	true, false	Only new pages will be listed. Default: All pages are shown
Heading	heading	text	Adds a heading above the list
Sort by	sort	Title, Time	Sort results by title or by latest edited.
Sort order	order	asc, desc	Ascending or descending sort order.
Trim	trim	number	Long article names are not cropped. Default: The title is cut off after 30 characters.
Show text	showtext	true, false	With this option, a line of the article contents will be shown alongside the title.
Trim text	trimtext	number	"trimtext" sets the number of characters of an article's content shown. This is only relevant when <i>showtext="true"</i> ). <i>Note</i> : trimtext="0" is <u>not</u> possible.
Show namespaces	showns	true, false	If true, the namespace prefix is shown with the page names.
Number with text	numwithtext	number	Anzahl der Artikel die mit Einführungstext angezeigt werden sollen. Nur effektiv wenn <i>showtext=true</i>
Meta	meta	true	The username and date for the last edit are shown.
Target	target	-	Obsolete
Exclude namespace (s)	excludens	number or name	Articles from given namespaces will not be shown. The namespaces can be entered by IDs or by names (comma- separated). Default: All namespaces are included.

#### Example output in source code:

<bs:smartlist category="ISO9001" new="true" count="7" ns="104" trim="false" />

#### **Newbies**

The tag <bs:newbies /> shows recently registered wiki users.

#### Parameters

Label	Parameter	Values	Description
Count - <b>count</b>			The number of users to be shown; the default value is 10.

#### Example in wikicode

<bs:newbies count="7"/>

# Toplist

This tag shows a list of the most visited pages.

#### **Parameters**

Label	Paramter	Values	Description
Count	count	number	The number of articles to be shown; the default value is 10.
Namespaces	ns	text, text	Only articles from these namespace will be shown. You can put several namespaces here, separated by commas.
Category	cat	text, text	Only articles from this category will be shown. You can put several categories here, separated by commas.
Period	period	month, alltime	The period that should be used. The default is alltime.

#### Example in wikicode

```
<bs:toplist count="7" ns="Help|QM" />
```

# Insert tags and magic words

A quality version of this page, approved on *30 July 2020*, was based off this revision.

The extension **InsertMagic** provides a dialog for inserting Magic Words in the visual editor.

1	Inserting magic words	8
2	Related info	8

## Inserting magic words

In edit mode, click on *Insert* in the editor toolbar and select *Magic word* from the dropdown menu.

Once the magic word is selected in the list on the left, a description, including usage examples, will appear on the right.

		٩				SO <sup>13</sup>

## What is VisualEditor?

**VisualEditor** (also called WYSIWYG - what you see is what you get) is an editor you can use without having to enter special markup (like HTML, wiki tags). The editor bars resemble those of commonly used word processing programs.

#### How to find the visual editor?

When you switch to the edit mode of an article, you will be presented with the wiki code at first. To activate the WYSIWYG editor, click on the following button:

The article's text will now be displayed with its formatting. Above the input field, you can see a new toolbar:

	•	1	H	Û	Ē	P	62	<i>&lt;</i> />	б		ø	<b>v</b> -		⊞	⊞		⊞	⊞
Ι	Ū	£	Ξ	Ξ	₫	M	Ω	÷1	For	mate	<b>•</b> (	Überschr	iften 🝷	<u>A</u> .	<u> </u>	8		
Scree	Screenshot: The WYSIWYG-Editor in BlueSpice																	

## The functions of the editor

The editor does exactly what you would expect from standard word processing programs: You mark the elements you want to change, and then choose the change, for example bold, from the toolbar. The change in formatting can be seen immediately. Hallo Welt! implements the WYSIWYG editor as an optional editor only so as not to restrict the variety of MediaWiki's design possibilities.

#### **Fundamental functions**

Button	Function
(( ))	switch to editing using the wiki code
	save
+ +	undo; redo
誦	find and replace
Ô	paste as formatted text (e.g. from Word)
<b>E</b>	insert signature
Ð	insert or edit link; you can find out how to insert links to any sites you want at the page InsertLink.
62	remove link

BlueSpíce MediaWiki	Extension/SmartList
	insert tags or MagicWords. More at InsertMagic
1E	insert image; the function InsertImage lets you upload and embed images.
<b>H</b>	insert file
*	insert category; the feature Insert Category gives you an overview of the categories which already exist and lets you assign them to the current article.
<b>T</b> -	insert checkboxes or checklists
₩ -	insert table (also "table properties" and "delete table")
	insert row above, insert row below, delete this row; insert column to the left, insert column to the right, delete this column
B <i>I</i> ⊻ ୫	bold; cursive; underlined;
	list with bullet points; numbered list
	decrease indent; increase indent
Ω	insert special symbol
لې	insert line break
Formate -	headings; Inline; alignment(left; center; rigth); table (standard, sortable, greyscale); pre
Überschriften 🔻	define headings
<u>A</u> -	text color
<u>T</u> *	remove formatting
20	edit in full screen mode

## Working with tables

As uncomplicated as it may be for other formatting, wiki code is not ideal for tables. However, in the WYSIWYG editor, you can work with tables quickly and easily. Note that the majority of the buttons which deal with table formatting will only become active when a table is selected.

## Tips for working with the WYSIWYG editor

- The WYSIWYG editor makes it easier to work with tables and images, in particular. We recommend working with normal wiki tags when making or editing complex pages.
- TinyMCE is a web editor and so cannot be guaranteed to work completely smoothly with desktop applications like, for example, Word. You will need to be tolerant and be pleased that the editor at least makes some of your work easier.
- The editor can be activated by default by changing your settings under personal settings => BlueSpice => visual editor.

## Settings

- When BlueSpice is installed, VisualEditor is set as default editor. This means, every new registered user gets VísualEditor as default.
- Every users can diable VisualEditor as default editor in his personal settings.
- To change a setting for all users, a sysadmin has to change all settings with help of a script.

View help page				

#### Features

**BlueSpiceSmartList** introduces various tags that can be placed on any page to show a list of the most relevant pages based on different criteria.

The tag *newbies* shows the latest added user accounts. The *toplist* tag shows the most popular content pages.

The tag *smartlist* accepts the following parameters:

- categories to show
- whether to show comments
- number of results
- namespace
- sort order
- time period
- show minor changes
- show page title with namespace
- only show new pages
- show page content
- maximum length of the title (in characters).
- maximum length of the page content (in characters).
