FAQ:ImageMap

Error: Fatal error: Cannot redeclare wfSetupImageMap() (previously declared in C:\xampp\htdocs\mediawiki\extensions\ImageMap\ImageMap.php:37) in C:\xampp\htdocs\mediawiki\extensions\BlueSpiceDistribution\ImageMap\ImageMap.php on line 40

Solution: We removed ImageMap from the BlueSpiceDistribution folder with BlueSpice 2.23.1 so this error won't occur in the future.

Error: I got the last package Bluespice 2.23.2 + Mediawiki 1.23.11. it seems that the sepcial link ImageMApEdit is not available under an image file

Solution: Please check your <mediawiki>/extensions/BlueSpiceDistribution/BlueSpiceDistribution.php You may want to compare it to the current BlueSpiceDistribution.php template file. Maybe the extension is just not activated (You can also look at "Special:Version" to check this).
