FAQ:UEModulePDF

Error: I have last full package mediawiki 1.23.11 + Bluspice 2.23.2. I notice this problem withis module UEModulePDF. It works well but , if i try to export an article where i have resized images, those images are not generated inside the PDF. When I upload images, some need to be reduced, so I change width via the widget. And after that those images does not appear anymore in the PDF when I export the article.

Solution: This is a known bug, that will be fixed in the next release. Actually there is already a patch available in the official GIT Repo [1]. In the meantime please just set
\$wgThumbnailScriptPath = false; at the end of your LocalSettings.php [1] <http://git.wikimedia.org/summary/mediawiki%2Fextensions%2FBlueSpiceExtensions.git>
