## Setting the filter option

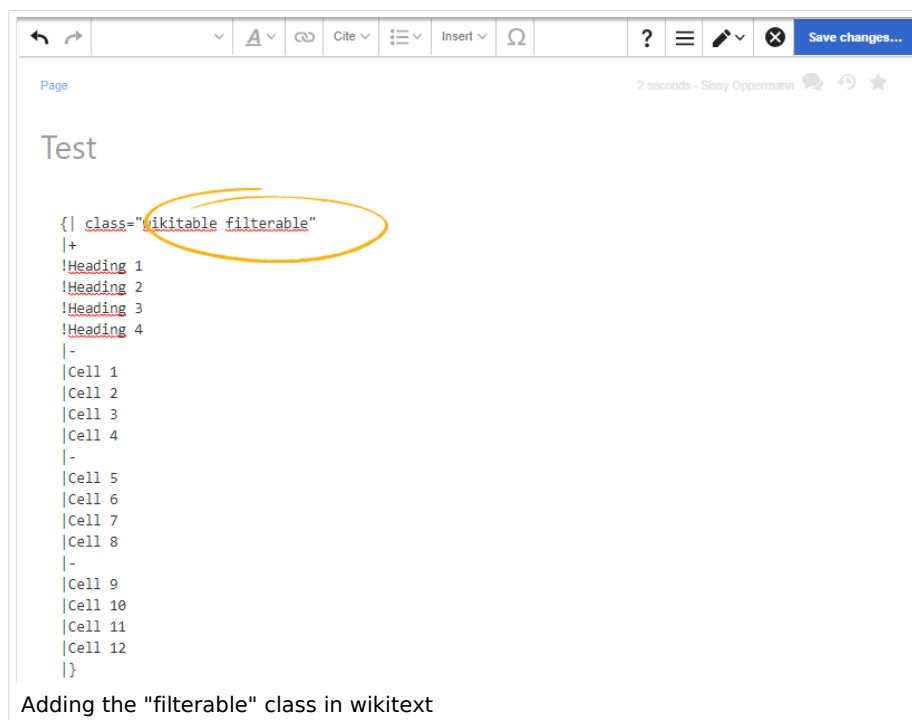

To create the table filter, the CSS class "filterable" is added to the table.

### Using VisualEditor

In edit mode, click on the table to open the options popup and click on "Properties". In the dialog that opens, toggle on "Filterable" option.

### Using Wikitext

In source-editing mode, add the class "filterable" to the table header.

```
{| class="wikitable filterable"
|+
!Heading 1
...
}
```

## Filtering tables

The special filter layout of a table is only applied in view mode.

To filter the values in the table, click on the header of the column to filter and select "Filter" from the dropdown menu. In the input field that opens, type in the filter text.

The screenshot shows a MediaWiki page titled "Test" with a table containing four columns: "Heading 1", "Heading 2", "Heading 3", and "Heading 4". The "Heading 3" column has a dropdown menu open, showing options for "Sort Ascending", "Sort Descending", "Columns", and "Filters". The "Filters" option is selected, and a search input field with the number "3" is visible. A yellow circle highlights the dropdown menu and the search input field.

Applying a table filter

**Note:** Any table styles that are applied by the table class are ignored as long as the value "filterable" exists in the class rule. A filterable table comes with its own table styling.
