Manual:Extension/Semantic MediaWiki

Semantic MediaWiki is an extension that semantically annotates text and other Wiki content. Thus, the specified content can be further evaluated, aggregated and exported.

Main features

- **Attributes**: The properties that can be assigned to contents are created as pages in the namespace Attribute
  - is always created with a data type: [[Has type::Text]]
  - exist as attribute name-attribute value pairs: [[Has captital::Berlin]]
  - can be queried on every Wiki page
- **Templates**: Semantic attributes are often used in templates to systematically collect data.
- **Forms**: Users can enter semantic values in forms
