Manual:Template/TemplateStyles

TemplateStyles allows to format templates appealingly.

Features

- Users with write access can style templates without administrators (opposite:Common.css)
- The CSS declarations are integrated via the <templatestyles> tag
- CSS is automatically assigned to the content area of the page

Example

Here you create a template for a quote. The link to the stylesheet is inserted at the beginning of the template.

```
<templatestyles src="Zitat/styles.css" />
<blockquote>
  <span class="pull-right">[[{{{1}}} | edit]]</span>
  {{ {{{1}}} }}
</blockquote>
```

The stylesheet itself is created as a subpage: template:quote/styles.css

```
blockquote {
  padding: 1em;
  background-color: #FAFAFA;
}
```

More info about TemplateStyles can be found on Mediawiki.org.
