## Features

---

**FlaggedRevs** is a MediaWiki extension that activates an approval mechanism.

New versions of an article are initially marked as drafts and remain so until a user with revision rights checks and approves the page.

The MediaWiki extension is customized in BlueSpice. It uses the [FlaggedRevsConnector](#) to work alongside the work flow tool [ReviewExtended](#), realising the complete functionality of an editorial process with a final approval step.

**Warning:** The setting `FR_INCLUDES_FREEZE` for handling the state of included files of an approved wikipage has [no long term support by](#) and should not be introduced in a new wiki for that reason.
