

## Reference:ParserFunctions

### Extension\[: ParserFunctions

| Overview                                         |                                                                |             |                         |
|--------------------------------------------------|----------------------------------------------------------------|-------------|-------------------------|
| Description:                                     | Enhance parser with logical functions                          |             |                         |
| State:                                           | stable                                                         | Dependency: | BlueSpice               |
| Developer:                                       | Tim Starling                                                   | License:    | <a href="#">GPL v2+</a> |
| Type:                                            | <a href="#">MediaWiki</a>                                      | Category:   | Rich Articles           |
| Edition:                                         | BlueSpice free, BlueSpice pro, BlueSpice Farm, BlueSpice Cloud |             |                         |
| For more info, visit <a href="#">Mediawiki</a> . |                                                                |             |                         |

### Features

The **ParserFunctions** extension enhances the wikitext parser with helpful functions, mostly related to logic and string-handling. Since MediaWiki 1.15, ParserFunctions has incorporated most (but not all) of the functions from the [StringFunctions](#) extension, which may be enabled or disabled.

For more information please visit [MediaWiki](#).
