## Setup:Installation Guide/Advanced/Backup

A quality version of this page, approved on 3 December 2020, was based off this revision.

## **Backup of the database**

To back up your database, use the native program "mysqldump" of MySQL/MariaDB: Open a console, switch to the directory <installpath-bluespice> and backup your database with the following command:

```
mysqldump -u <username> -p --lock-tables <datenbank> > database.sql
```

For <username> , use the administrative database user (usually "root"), and for <datenbank> , use the database of your MediaWiki/BlueSpice installation.

**Note:** In Windows, make sure that your environment variables are set correctly, so that you can access the command "mysqldump".

## **Backup of the file system**

Back up the complete directory <installpath-bluespice>, which now also includes the database image, to a different location on your server.

For security reasons, immediately delete the file <installpath-bluespice>/database. sql , since it can be accessed from the browser.
