Setup:Installation Guide/Advanced/Backup

A [quality version](#) of this page, [approved](#) on *3 December 2020*, was based off this revision.

Backup of the database

To back up your database, use the native program "mysqldump" of MySQL/MariaDB: Open a console, switch to the directory `<installpath-bluespice>` and backup your database with the following command:

```
mysqldump -u <username> -p --lock-tables <datenbank> > database.sql
```

For `<username>` , use the administrative database user (usually "root"), and for `<datenbank>` , use the database of your MediaWiki/BlueSpice installation.

Note: In Windows, make sure that your environment variables are set correctly, so that you can access the command "mysqldump".

Backup of the file system

Back up the complete directory `<installpath-bluespice>` , which now also includes the database image, to a different location on your server.

For security reasons, immediately delete the file `<installpath-bluespice>/database.sql` , **since it can be accessed from the browser.**
